

# 1. CONFIRM THE PROBLEM (You are trying to solve)

Traditional TRPGs face a critical shortage of human Game Masters due to heavy prep work (3–5 hours of prep for a 3-hour session). Hundreds of pages of complex rules intimidate beginners, and there is a lack of lightweight online platforms designed for friend groups to play together easily.

## 2. CREATE PERSONAS (Based on user research and interviews)

### PERSONA 1: The Novice Adventurer (Alex, 21)

A college student and fantasy game fan. Alex wants to try TRPGs with close friends but feels completely overwhelmed by hundreds of pages of complex rulebooks and character stats. Needs an easy, welcoming entry point without steep learning curves.

### PERSONA 2: The Burned-Out Game Master (David, 28)

An experienced Game Master who loves running stories for his friend group. However, spending 4 to 5 hours every week writing plots, drawing maps, and balancing stats leads to severe burnout and leaves him no time to actually enjoy playing.

### PERSONA 3: The Friend-First Co-op Player (Chloe, 24)

A busy young professional who loves hanging out and gaming online with her tight-knit friend circle. She needs a lightweight, cross-platform session tool that lets her group jump into a continuous shared story instantly on weekends without scheduling headaches.

### 3. IDENTIFY PERSONAS' CHALLENGES (Write "how could we help" questions)

#### PERSONA 1's CHALLENGES

Frustrated by complicated rulebooks and scared of making mistakes during character creation.

**How could we help** beginners instantly start playing without reading heavy rulebooks, using automated guidance and simple character setup?

#### PERSONA 2's CHALLENGES

Exhausted by hours of manual prep work and lacks the free time to design maps and manage campaign lore.

**How could we help** burnt-out Game Masters eliminate prep stress by letting AI handle NPC reactions, world generation, and story pacing?

#### PERSONA 3's CHALLENGES

Hard to coordinate schedules, while current tools are clunky or built for local single-players rather than online friend group hangouts.

**How could we help** close friend groups easily team up across devices (PC, mobile, web) to enjoy persistent, long-term shared storytelling together?

## 4. SELECT YOUR BEST IDEA (...for solving each persona's challenges)

### PERSONA 1's SOLUTION

#### **AI-Guided Onboarding & Automated Character Creation.**

A simple conversational interface where players describe their dream hero in plain English, and the system automatically generates character stats and rule-checks.

### PERSONA 2's SOLUTION

#### **The AI Game Master (AI DM) Engine.**

A smart assistant that instantly generates dynamic story paths, environment descriptions, and NPC dialogues on the fly, reducing a GM's prep time from hours to zero.

### PERSONA 3's SOLUTION

#### **Cross-Platform Friend-Party Room with a Rule-Engineered World.**

A cloud-based collaborative platform where friends can join via web or mobile links, sharing a single persistent world that tracks all their choices fairly.

## 5. DESCRIBE YOUR IDEA (How it works, Process, Screens, 3D Model, etc.)

### 1 PERSONA 1's DETAILS ON SOLUTION

When Alex logs in, a friendly AI assistant guides him through a short chat. Instead of rolling stats manually, Alex types: *"I want to be a clever elf archer."* The AI instantly creates the character sheet and introduces a gentle prologue to teach rules naturally.

### 2 PERSONA 2's DETAILS ON SOLUTION

David selects a world template. Instead of writing notes for hours, he lets the AI DM handle real-time environment descriptions and rule checks using function calling. This allows David to play alongside his friends stress-free.

### 3 PERSONA 3's DETAILS ON SOLUTION

Chloe generates a "Friend Room" link with one click and shares it in her group chat. Her friends join instantly from phones or laptops. As the team makes wild choices, the backend rule engine locks in the consequences, updating their shared digital world permanently for future sessions.
