

Seneca HELIX Business Model Canvas

1: Customer Blocks Workbook

Product: Mobile AI Voice TRPG (Tabletop Role-Playing Game) with Light Visuals

Executive Overview & Strategic Direction

- **Strategic Breakthrough:** Pivot away from hardcore tabletop veterans (who have entrenched groups and rigid rule preferences) to capture the massive blue ocean of **mainstream anime fans, CRPG gamers, and interactive story lovers**.
 - **Core Product Philosophy: "Rules Invisible, Experience Forefront"**—System and AI automate calculations, rulebooks, and scheduling; players receive pure creative freedom, dramatic dice rolling, and voice-acted immersion.
-

1. Define Your Customer Segments (Personas)

Segment 1: The Anime Enthusiast & TRPG Spectator ("The Replay Watcher")

- *Persona:* High school and college students, avid consumers of TRPG replay streams (YouTube, Bilibili, Twitch), fans of anime, manga, and dark fantasy lore (Call of Cthulhu, D&D).
- *Behavior:* Loves watching dramatic tabletop moments and character creation, but has never played a real tabletop game.

Segment 2: The Mainstream CRPG & Narrative Gamer ("The Narrative Seeker")

- *Persona:* Fans of single-player, choice-driven RPGs (such as Baldur's Gate 3, Divinity, Disco Elysium).
- *Behavior:* Seeks deep storyline branches, meaningful dialogue options, and tactical dice checks, but lacks the time to sit at a gaming PC for 100+ hours.

Segment 3: The Busy Interactive Fiction & Mystery Fan ("The Casual Sleuth")

- *Persona*: Young professionals and university students who enjoy murder mystery games (Jubensha), escape rooms, and interactive visual novels.
 - *Behavior*: Has fragmented free time (commutes, late evenings) and struggles with group coordination.
-

2. Specify the Need of Each Segment (The "Hair-on-Fire" Problem)

Segment 1's Need

- *The Hair-on-Fire Problem*: "I love TRPG stories, but 300-page rulebooks scare me, I don't know any experienced Game Masters, and I'm terrified of speaking or embarrassing myself in front of strangers."

Segment 2's Need

- *The Hair-on-Fire Problem*: "Mobile RPGs are repetitive, auto-play gacha games with zero real player agency. I want true roleplaying freedom on my phone without needing to coordinate a 6-hour weekend tabletop session."

Segment 3's Need

- *The Hair-on-Fire Problem*: "Organizing a tabletop session or murder mystery party with friends is impossible because someone always cancels last minute. I need a story game I can play solo or casually with 1 friend whenever I have 30 minutes free."
-

3. Draft Unique Value Proposition (UVP) for Each Segment

Segment 1's UVP

- *Value*: "Play the anime-style tabletop adventure you've always watched online—zero rulebook reading, instant AI voice acting, and zero social embarrassment."
- *Differentiation*: Pure spectator-to-player conversion with zero barrier to entry.

Segment 2's UVP

- *Value*: "The creative freedom of Baldur's Gate 3 in your pocket. Speak or type any action; our AI DM adapts the world dynamically with fair, invisible background dice checks."
- *Differentiation*: True generative storytelling rather than pre-scripted dialogue trees.

Segment 3's UVP

- *Value*: "An on-demand tabletop mystery ready 24/7. Play at your own pace, pause anytime, or bring a friend along while AI runs the game."
 - *Differentiation*: Eliminates the scheduling nightmare and group flaking of traditional TRPGs.
-

4. Set Up Your Product Distribution (Channels)

- **Segment 1 (Anime / TRPG Spectators)**: Viral gameplay highlight clips on TikTok, YouTube Shorts, and Bilibili (showcasing funny critical fails and emotional voice acting); VTuber and anime streamer sponsored gameplay; Discord anime communities.
 - **Segment 2 (CRPG & Narrative Gamers)**: TapTap, App Store and Google Play featured game selections; gaming review outlets; Reddit CRPG forums; Steam cross-promotion community posts.
 - **Segment 3 (Casual Sleuths & Busy Professionals)**: Lifestyle app recommendations; social media word-of-mouth campaigns; podcast sponsorships; in-game referral bonuses for sharing quick-play links with friends.
-

5. Build & Manage Customer Relationships

- **Segment 1 (Anime Fans)**: Warm, encouraging AI companion; non-judgmental guided onboarding; community sharing of original characters (OCs) and fan art.
- **Segment 2 (CRPG Gamers)**: Intellectual co-storytelling; deep worldbuilding lore codex; community leaderboards for creative solutions; regular drops of complex story modules.
- **Segment 3 (Casual Sleuths)**: Reliable on-demand service; bite-sized episodic content drops; smart notification reminders to resume unfinished adventures.

Page 10 Seneca HELIX UVP Master Formula (Positioning Statement)

- **We help:** Mainstream anime enthusiasts and story-driven RPG gamers who love tabletop storytelling
 - **Statement of Need:** who are held back by complex rulebooks, scheduling headaches, and social anxiety
 - **So they can:** experience spontaneous, voice-acted, high-stakes roleplaying adventures anytime on mobile in 30-minute sessions
 - **Unlike:** rigid, linear mobile RPGs and intimidating, time-consuming tabletop games (D&D / CoC)
 - **Product Name:** *EchoRealm* (Mobile AI Voice TRPG)
 - **Unique Capability:** seamlessly hides the rules behind automated AI dice mechanics while delivering fully voice-acted, dynamic storytelling and light visuals that adapt to any player idea.
-

Appendix: Integration with Full Business Model Canvas (Infrastructure & Financials)

- **Key Partners:** Cloud GPU / LLM providers, TTS audio vendors, indie tabletop authors, app stores.
- **Key Activities:** Anti-hallucination agent engineering, voice latency reduction, modular quest writing.
- **Key Resources:** Fine-tuned TRPG model, character voice library, lightweight mobile engine.
- **Cost Structure:** AI compute inference (tokens/TTS), engineering team, art assets, marketing.
- **Revenue Streams:** Monthly Adventure Pass subscription, thematic DLC module packs, dice/portrait cosmetics, creator marketplace share.
