Next Week!!

Order your free ticket today

Things to know

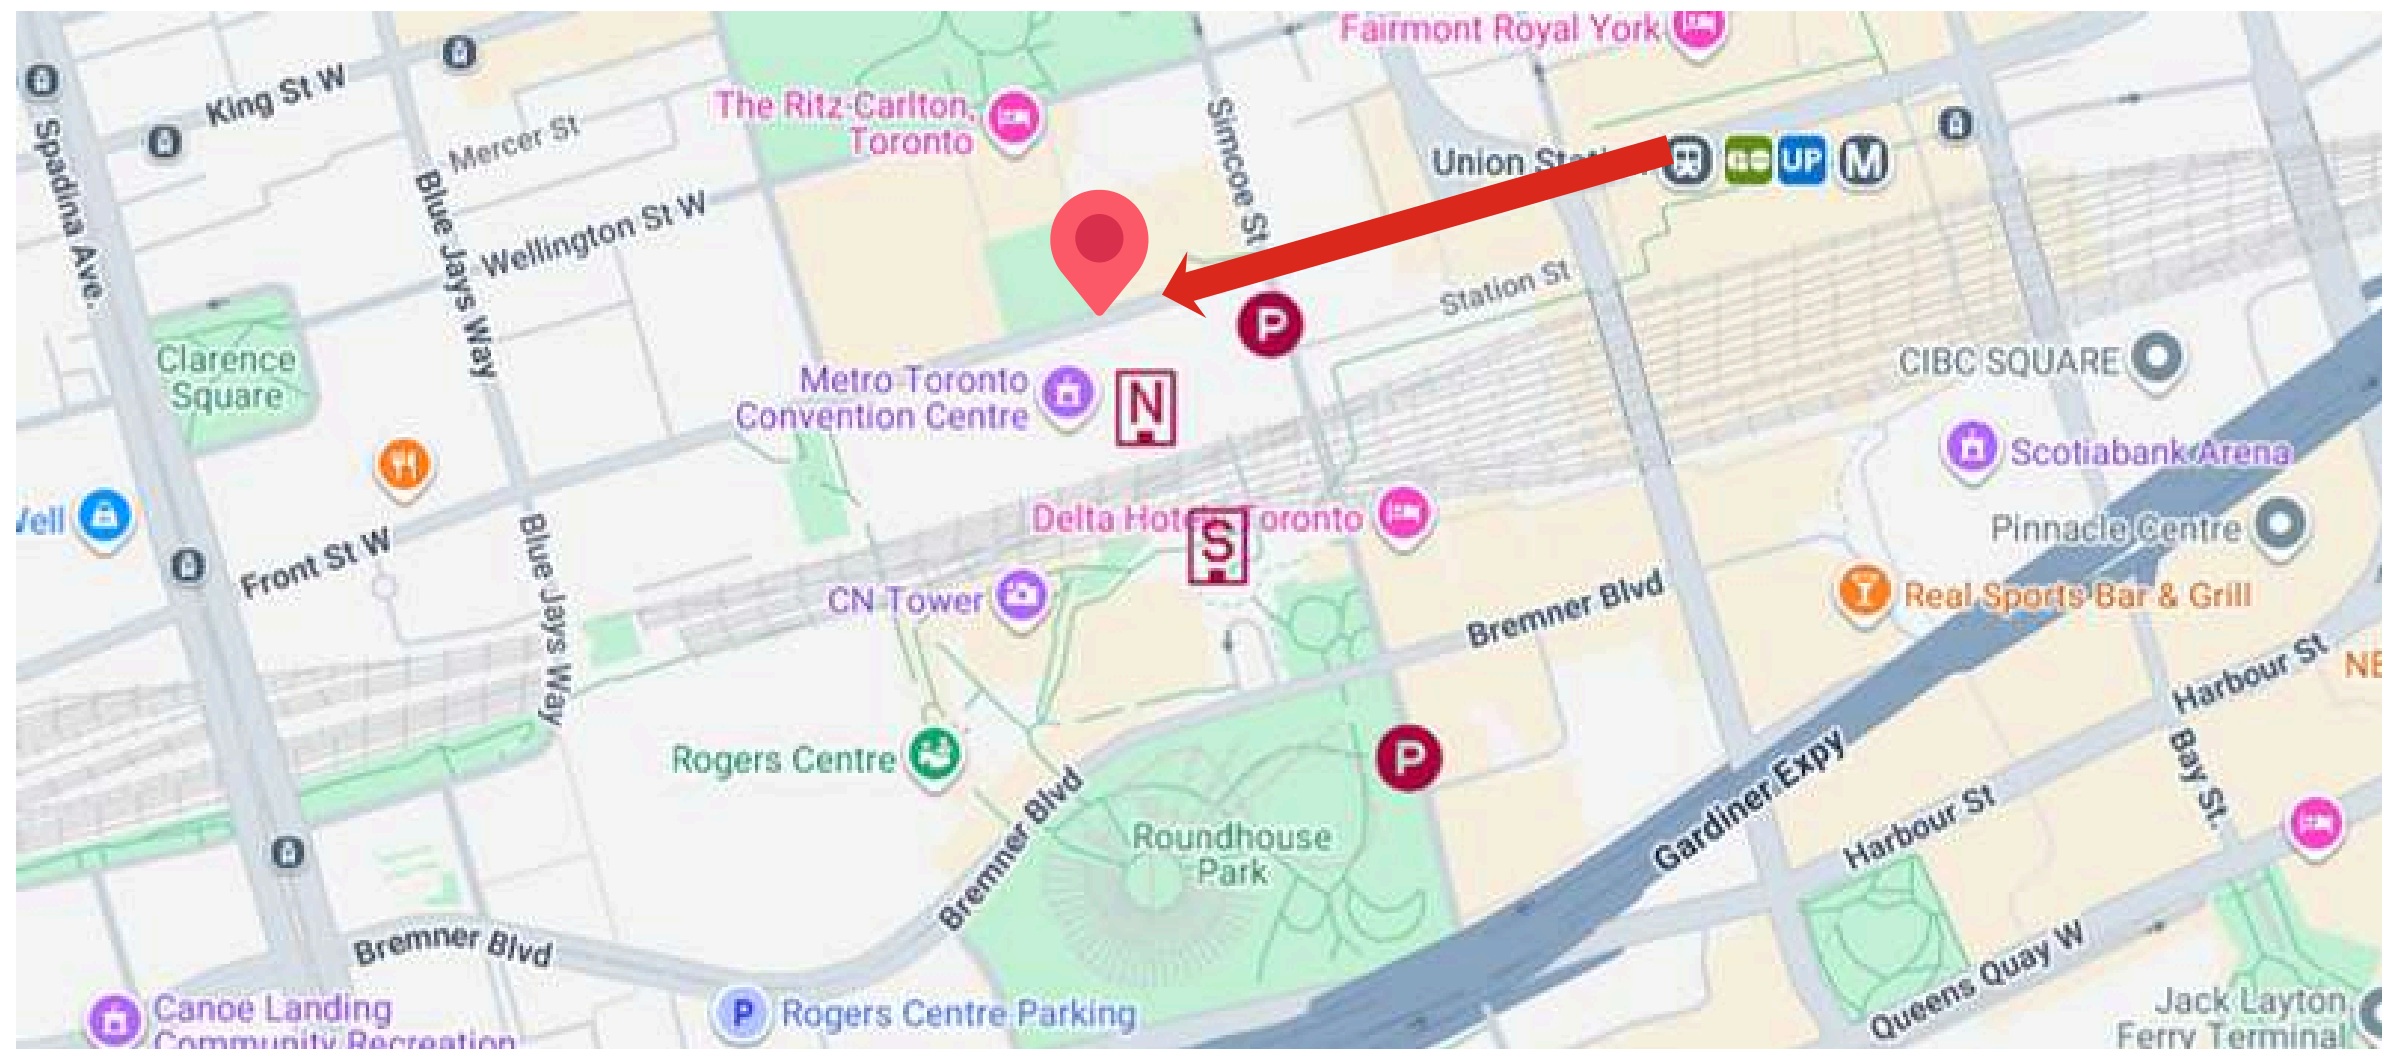

- Arrive by 8:45 AM to pick up your ticket
- Opening session starts at 9:15 AM
- Look for Suhitha or me for the attendance code when you arrive. If you arrive after the session start time, please look for us after the opening ceremony.
- Meet at the photo booth at 10:15 AM for a group photo
- From 10:30 am to 11:00 am, we will take a look at the exhibit
- After 11:00 am, you are free to roam
- Communication on MS Teams Chat

Microsoft Teams

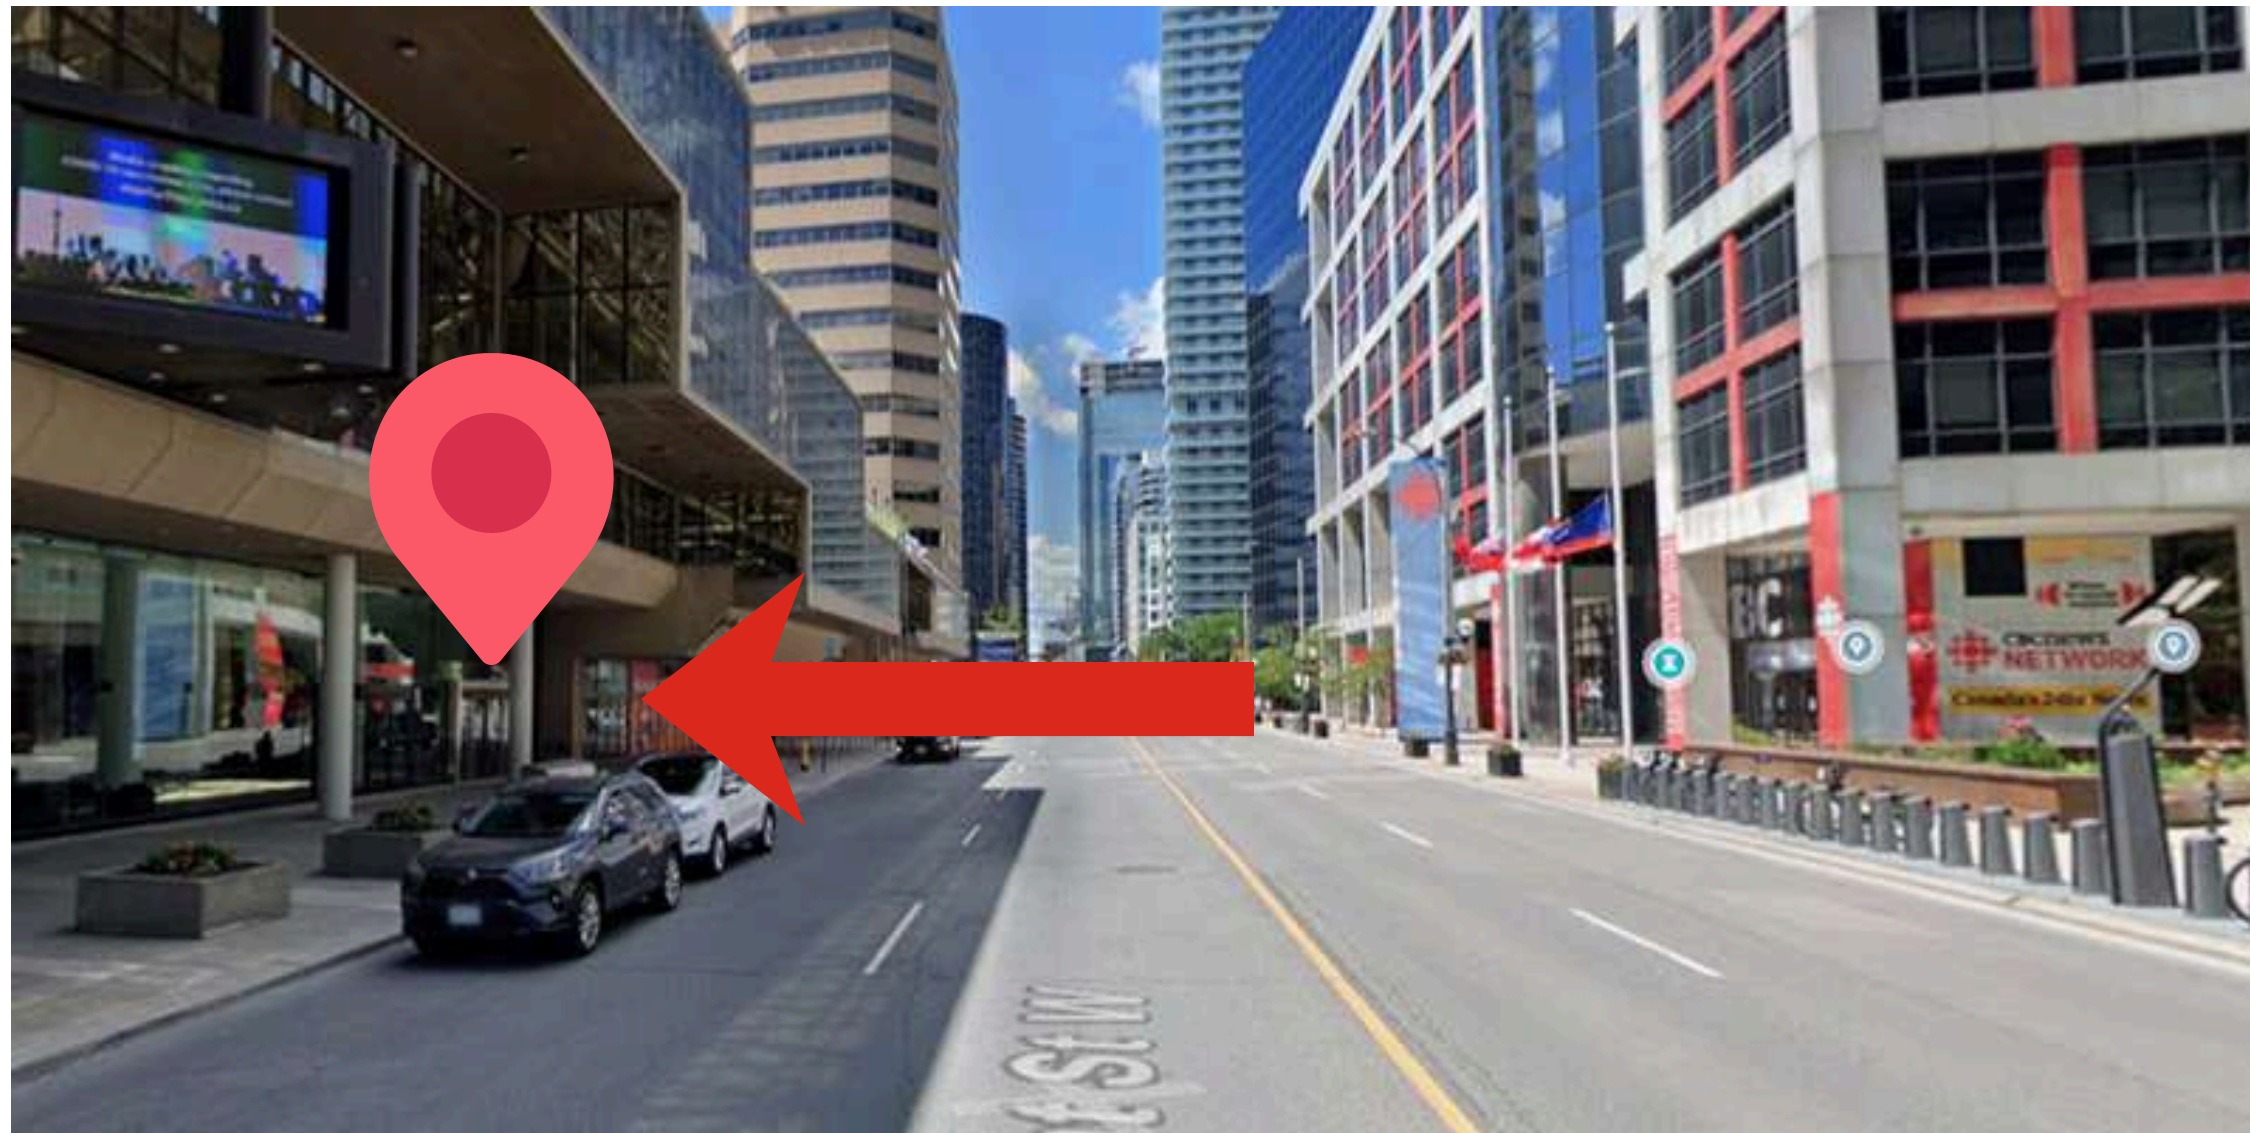

Class Trip

Things to know

Program Schedule

SME Summit & Small Business Show

Communicate on MS Teams

Microsoft Teams

Attendance for the trip

You must submit a photo of the event and a 50-word reflection on what you learned.

Due on Monday, October 19 at 11:59 pm.

Class Trip

Seneca
POLYTECHNIC

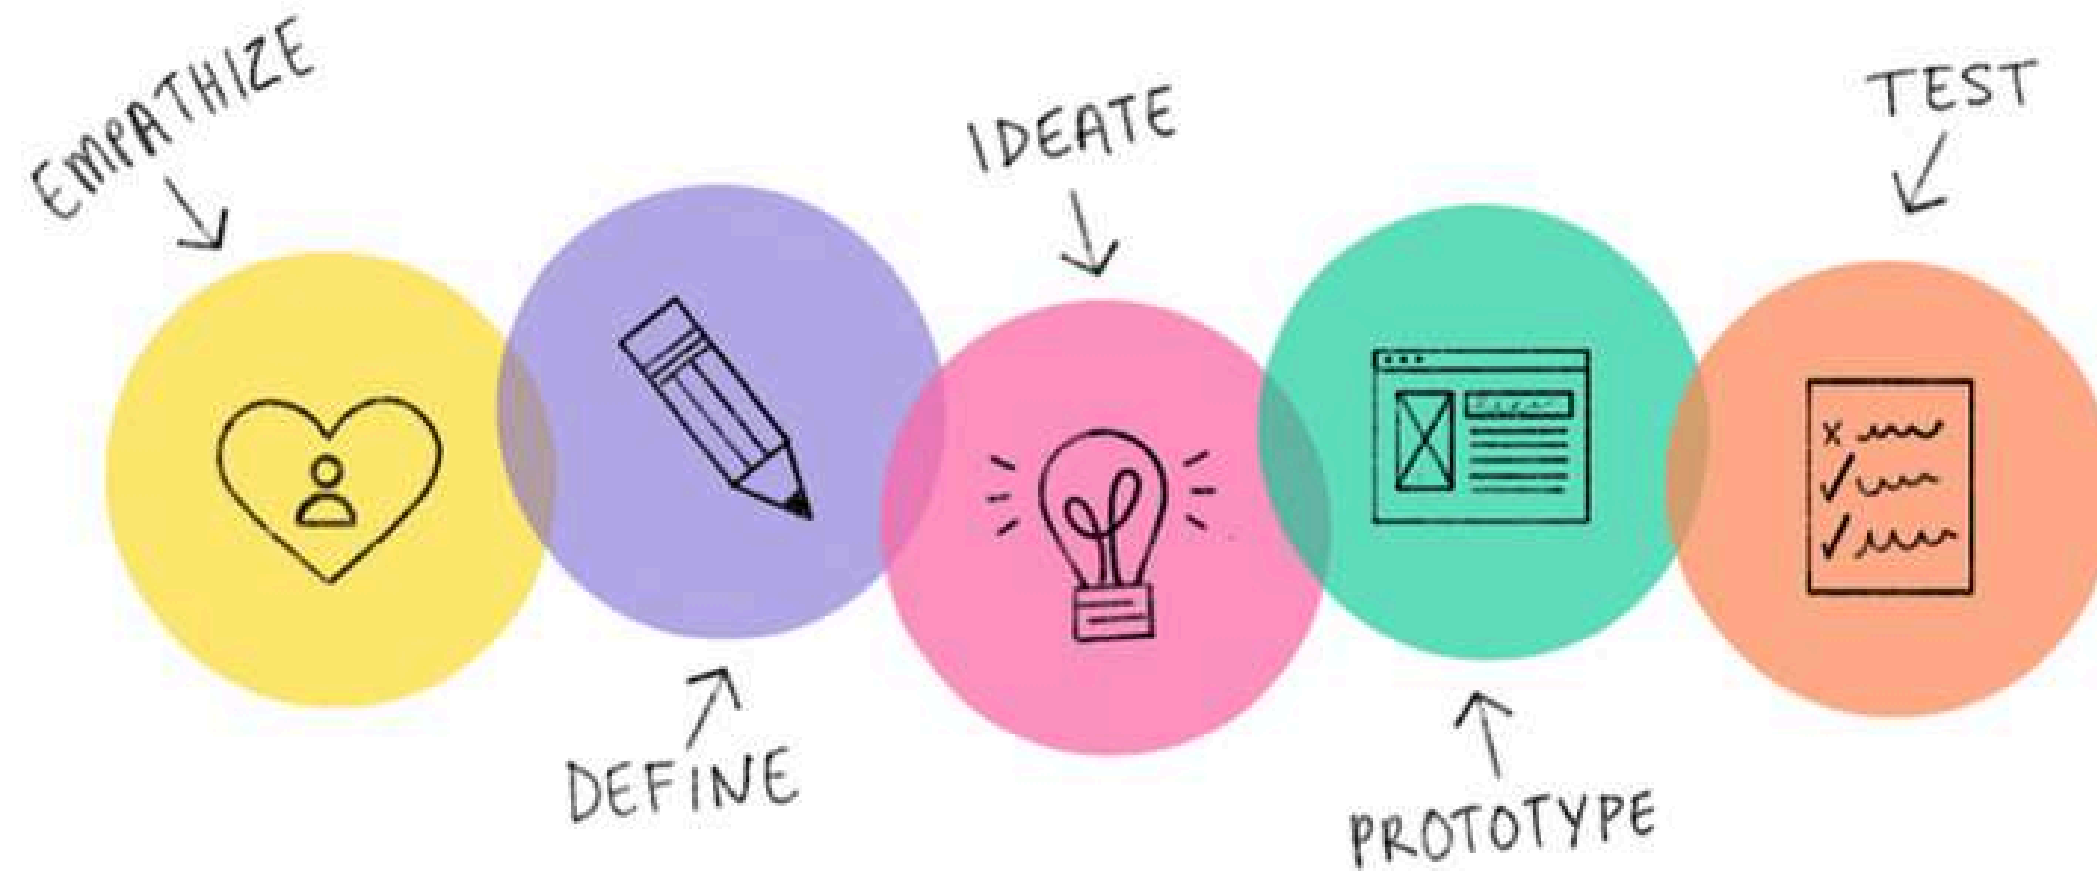

Prototyping & Validation

1. Lean Startup Methodology
2. Minimum Viable Products
3. Validation
4. Finding an Industry Expert

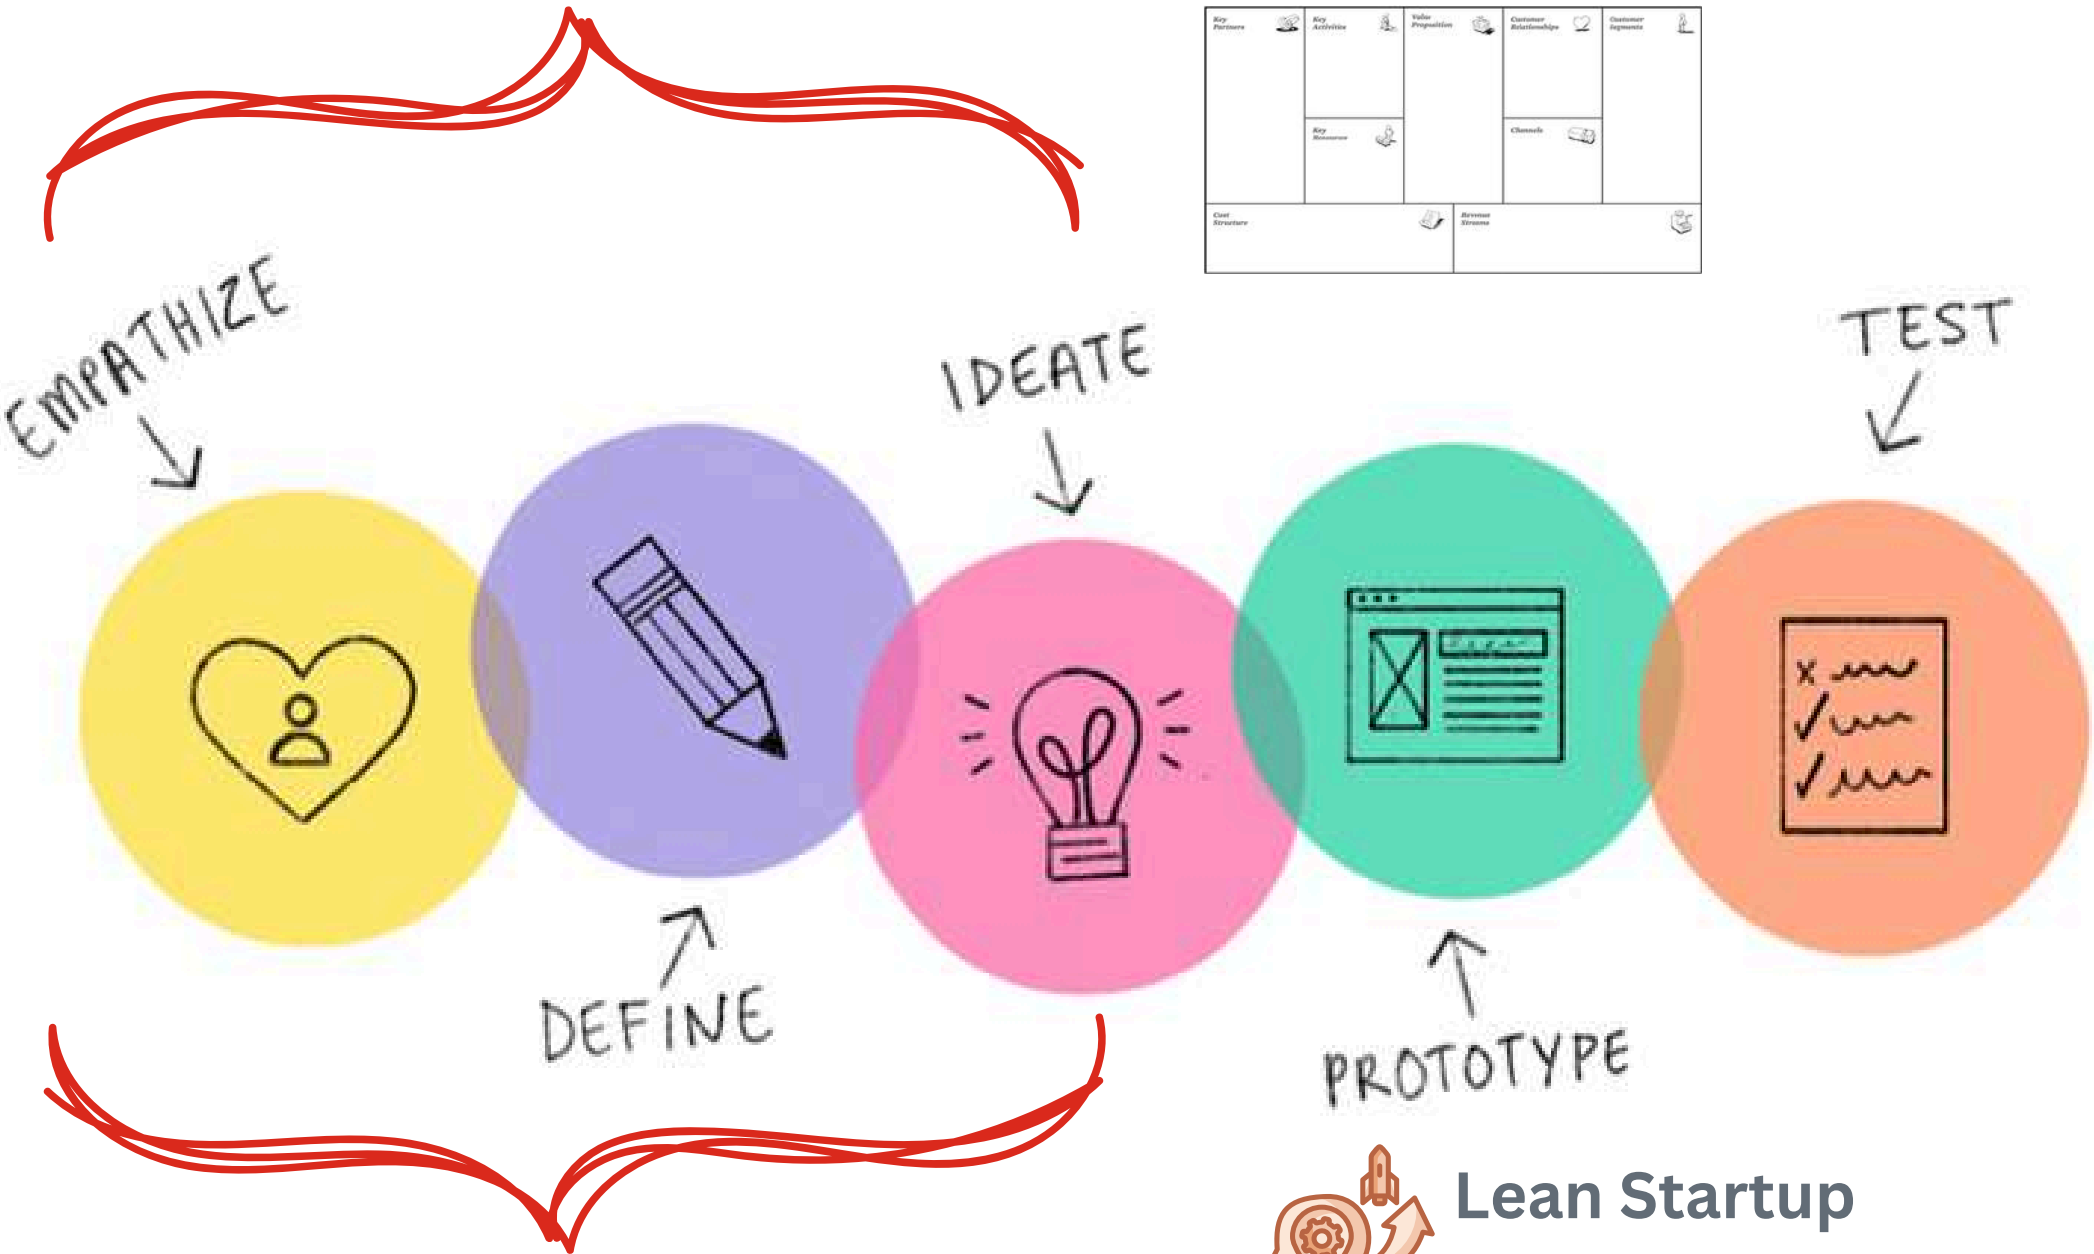

Design Thinking

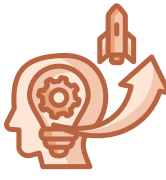

Business Model Canvas

Key Partners	Key Activities	Value Proposition	Customer Relationships	Customer Segments
	Key Resources		Channels	
Cost Structure		Revenue Streams		

 User Persona

 Lean Startup Methodology

 Problem Statements and Market Research

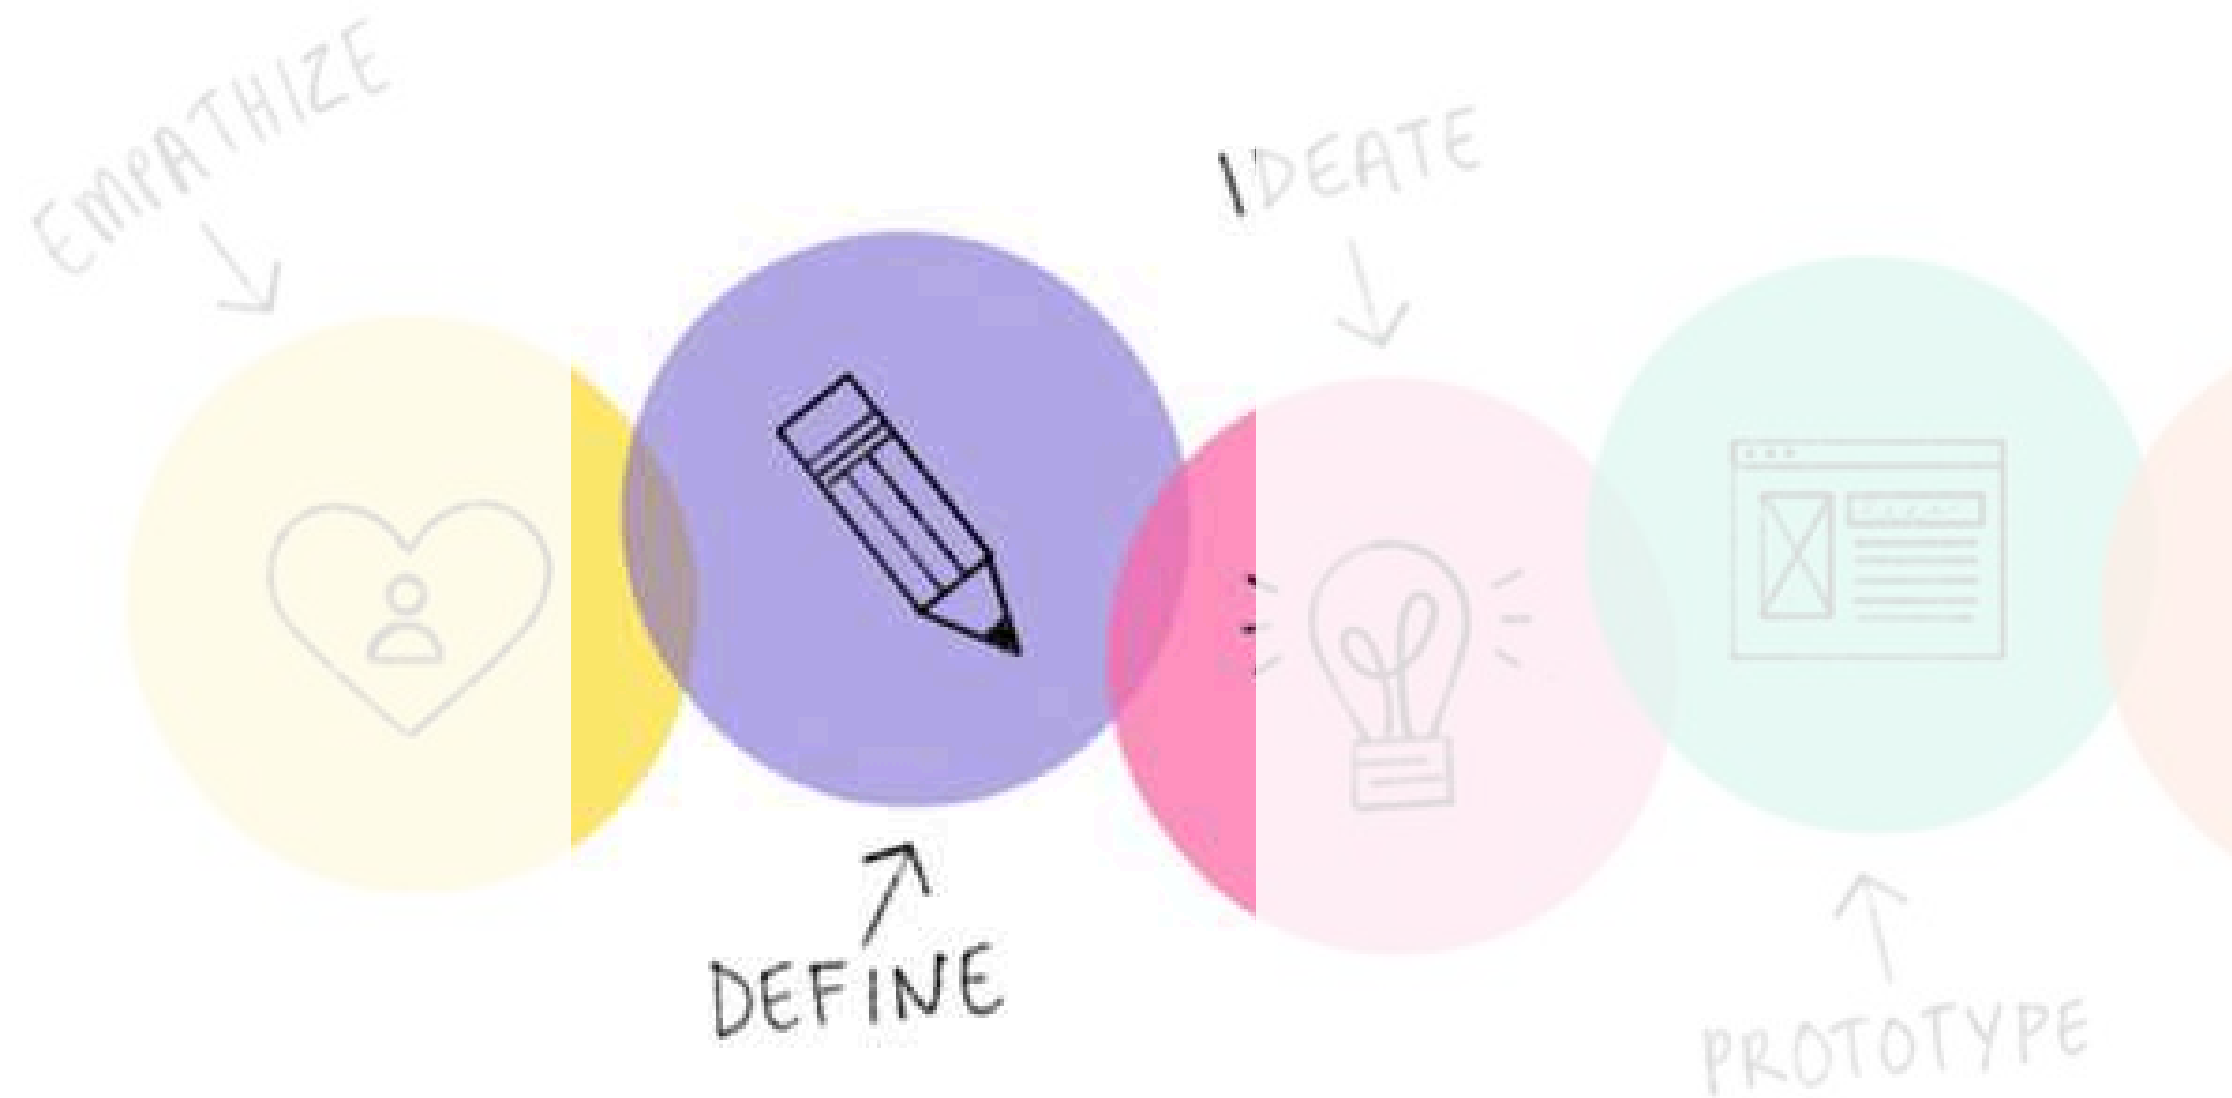

Empathize

Develop a deep understanding of the challenge/problem.

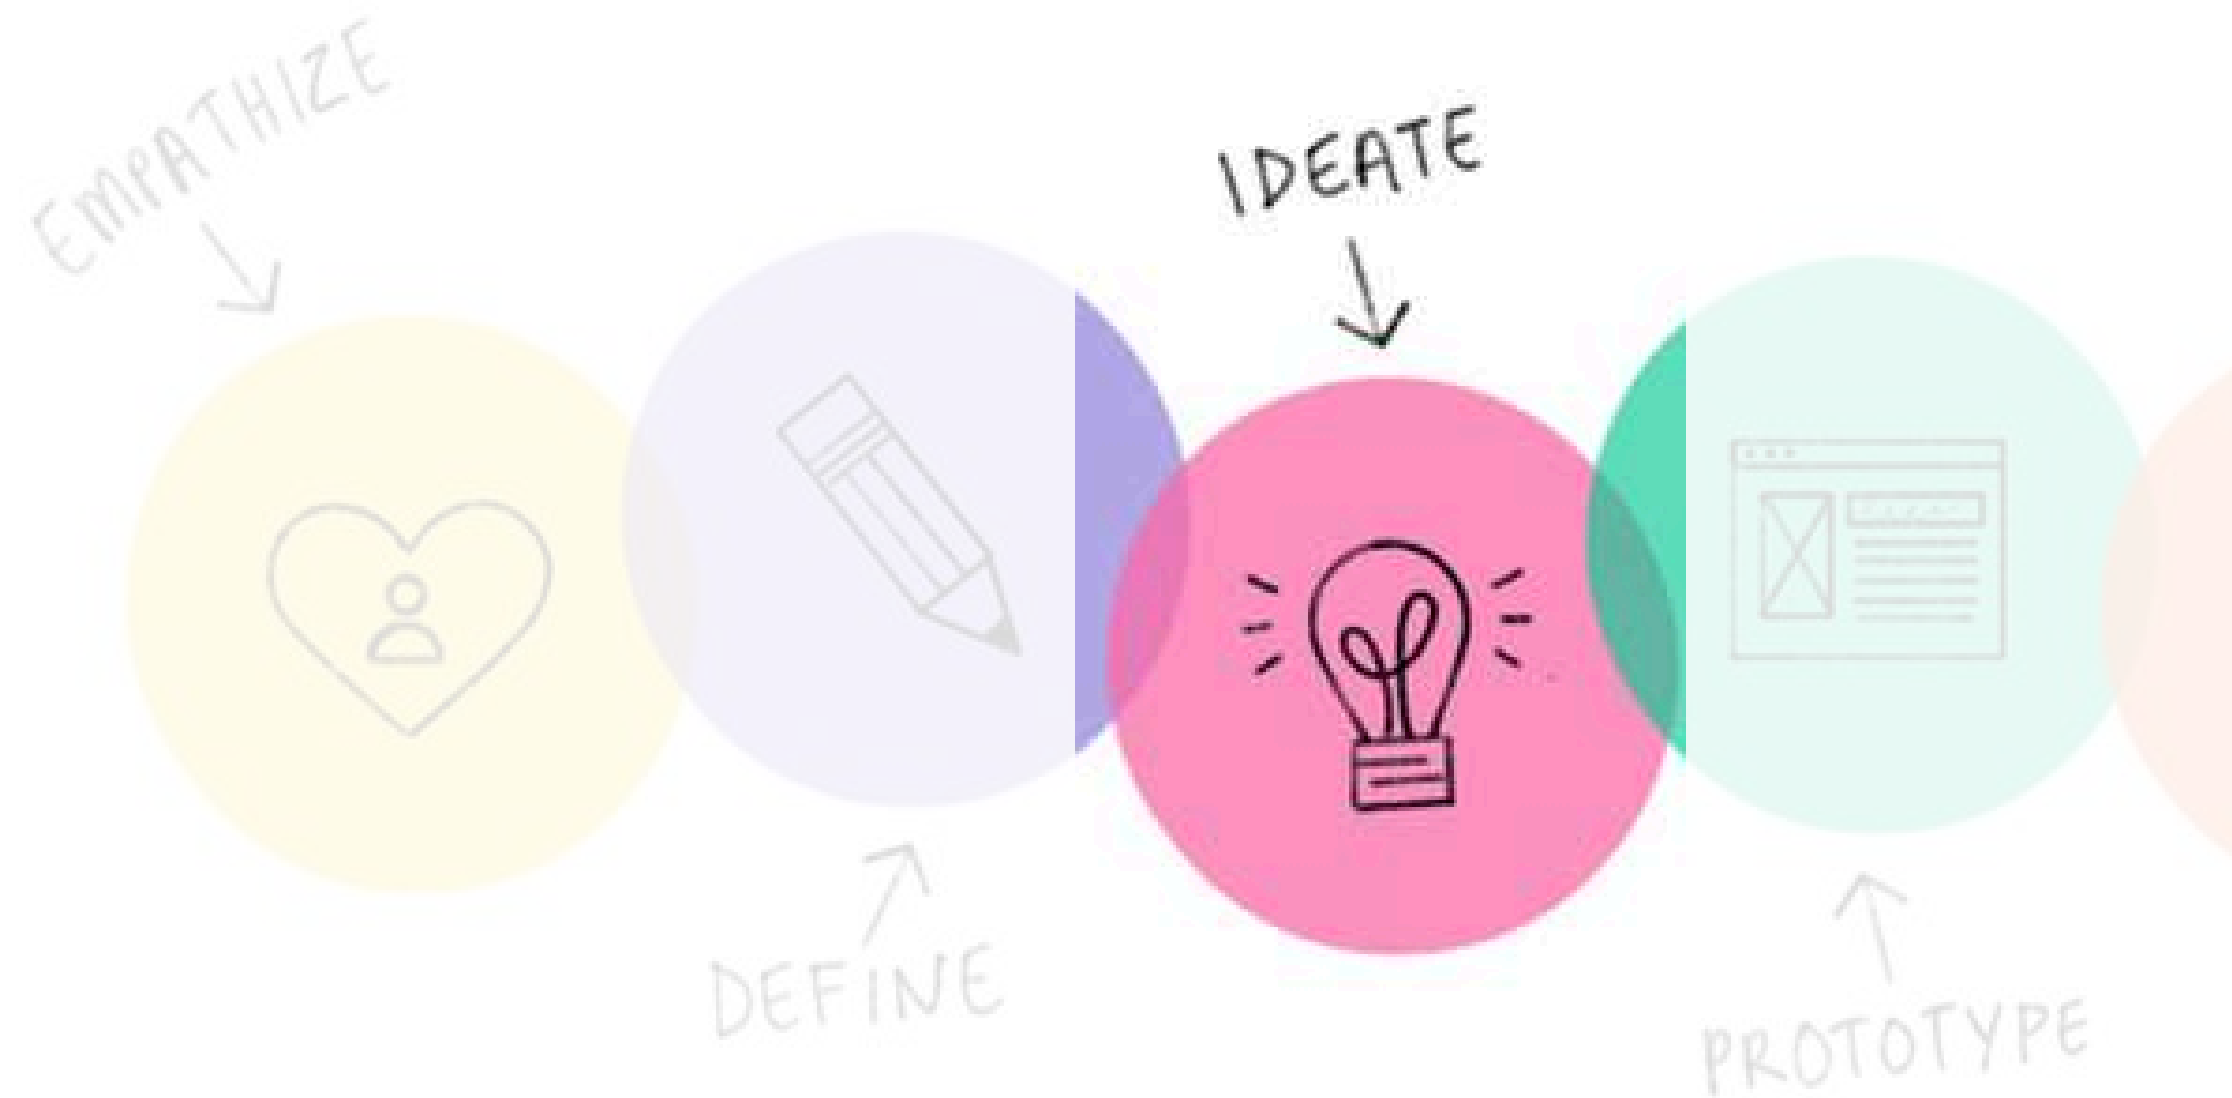

Define

Clearly articulate the problem you want to solve.

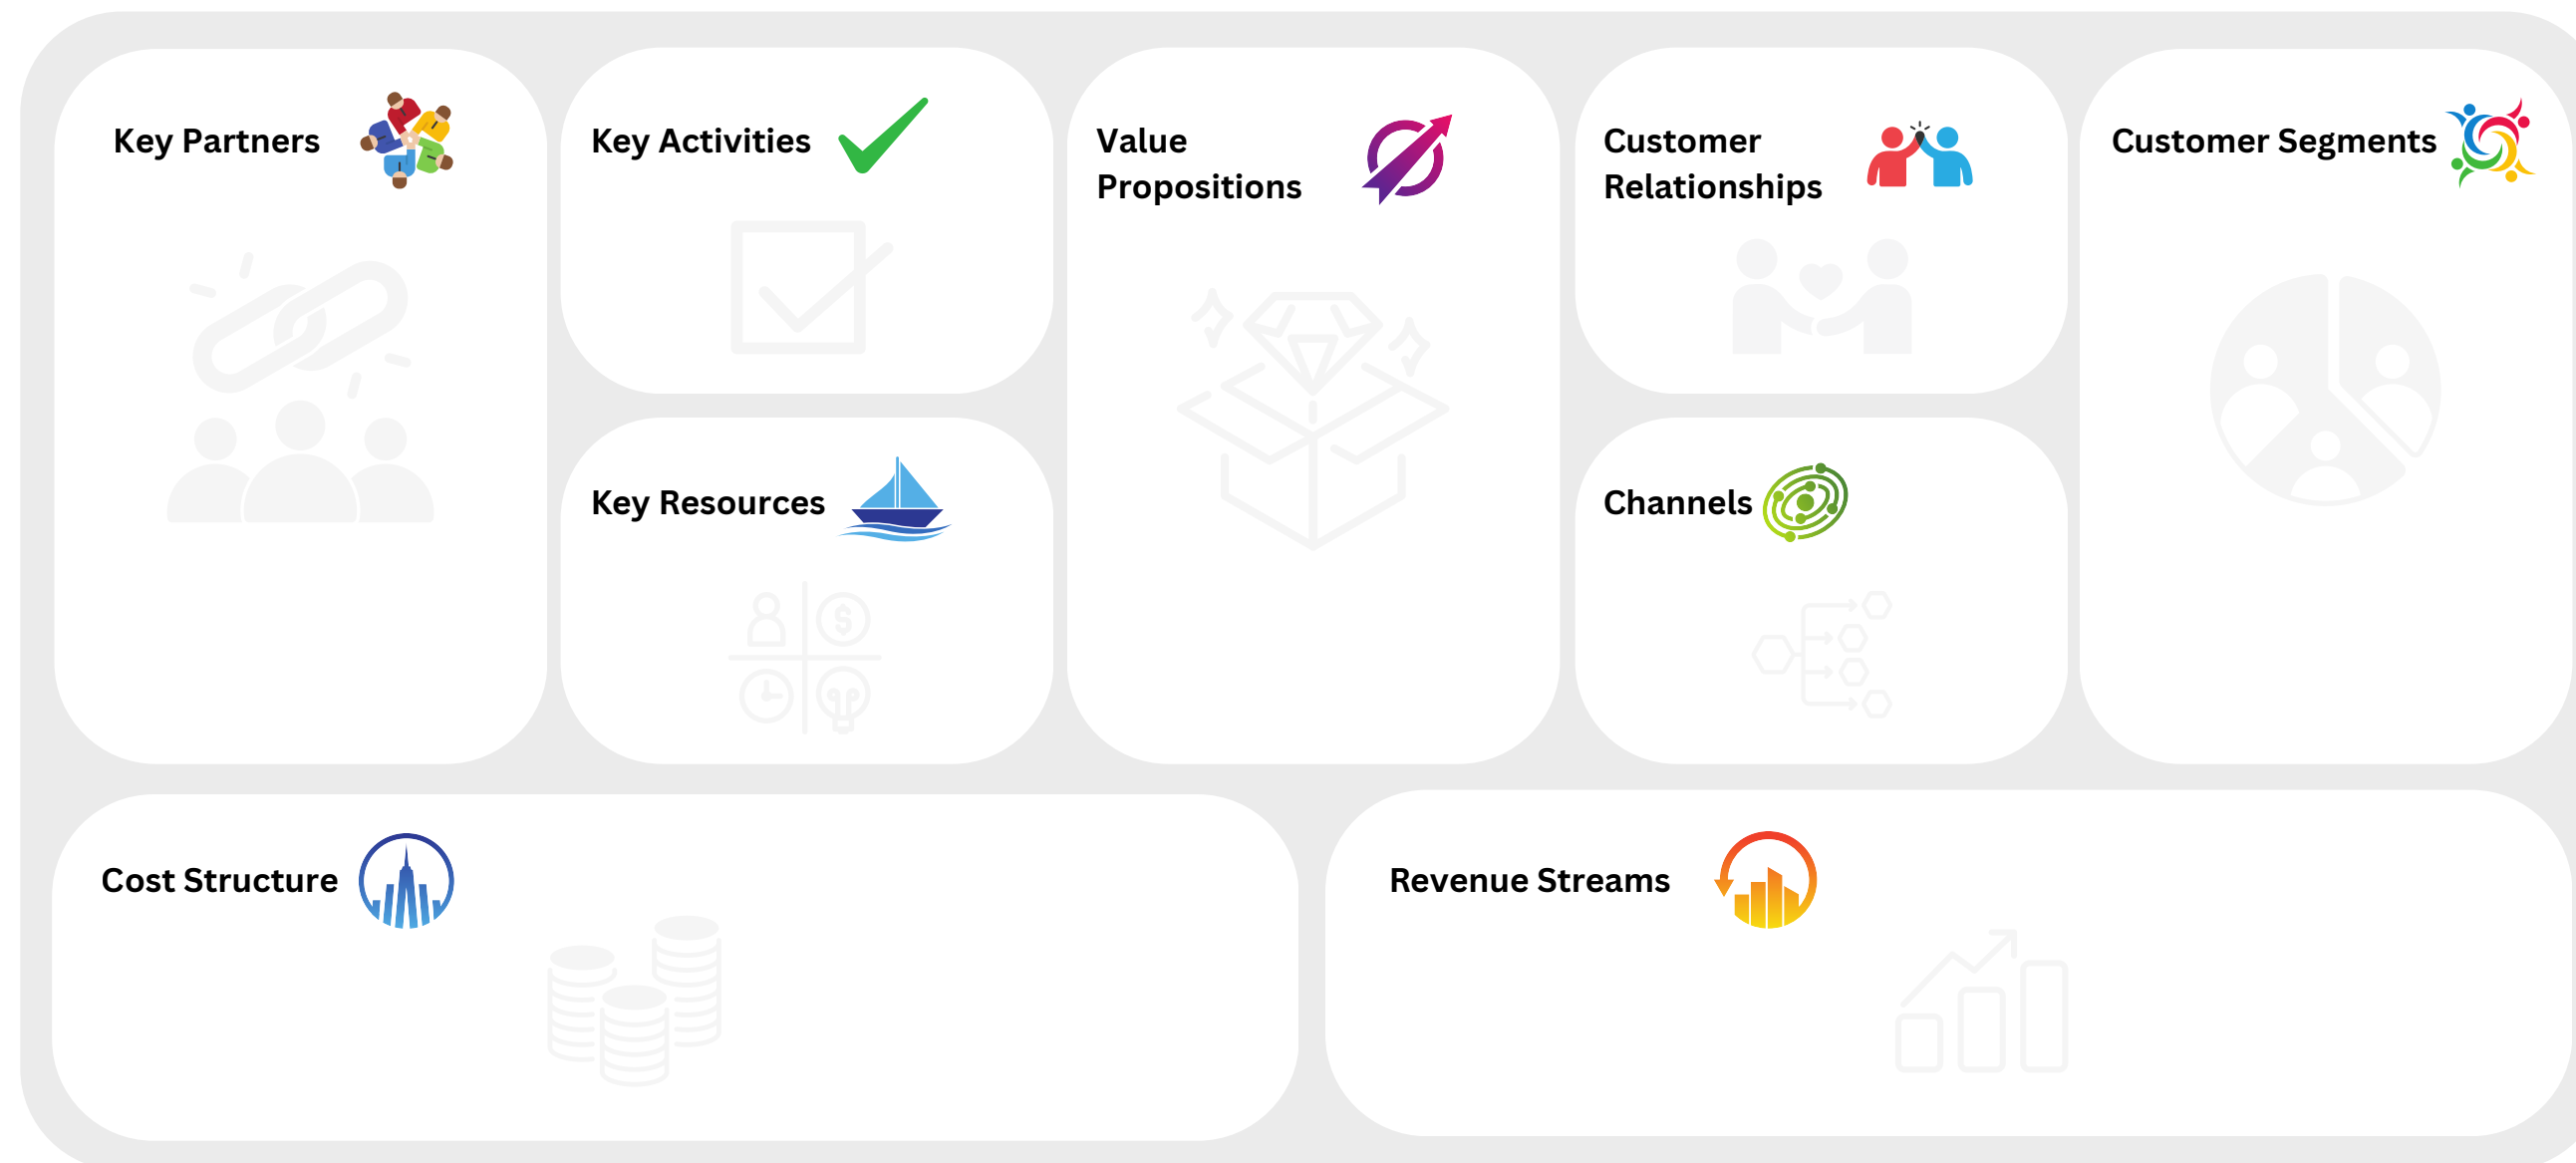

Ideate

Brainstorm potential solutions; select and develop your solution.

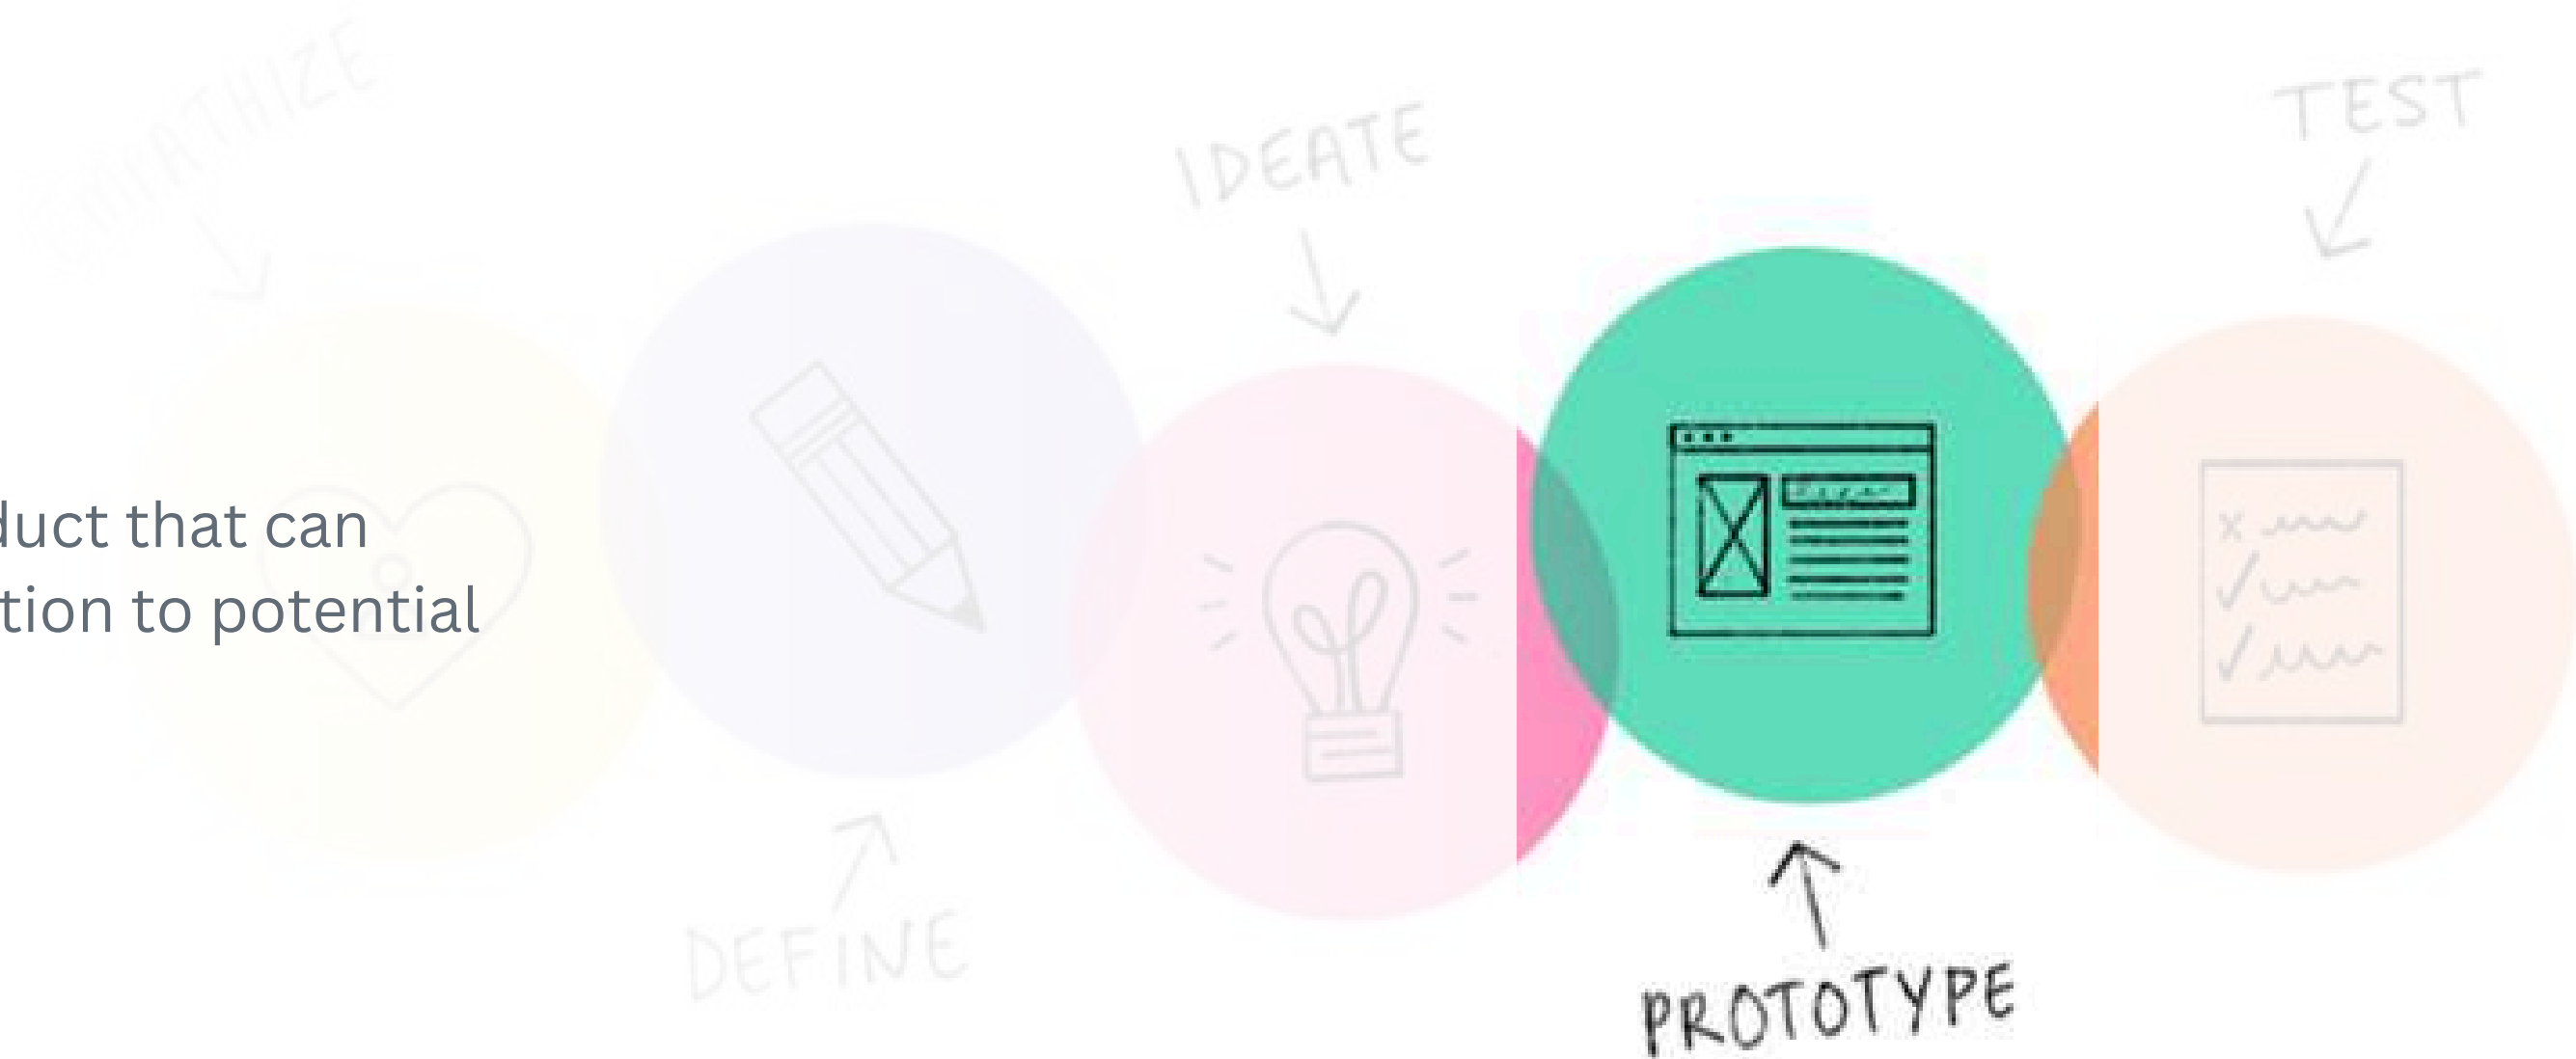

Business Model Canvas

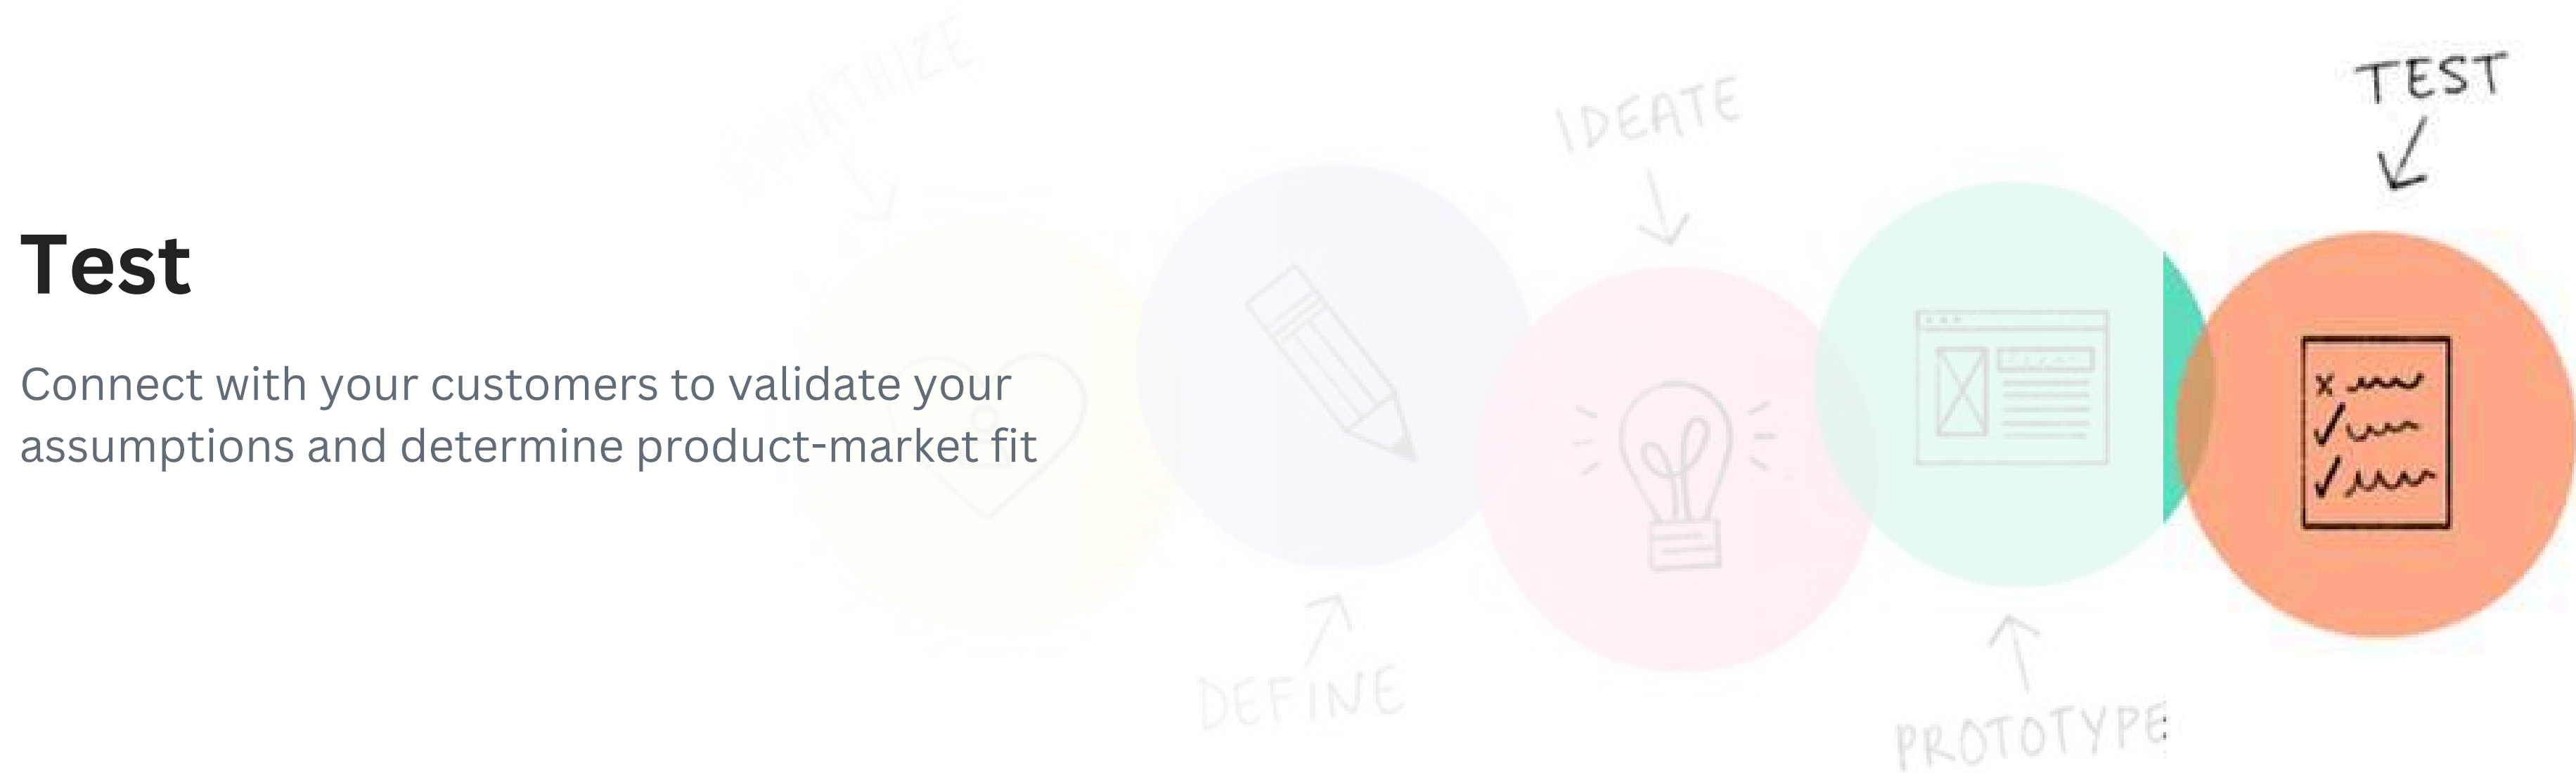

Prototype

Develop a minimum viable product that can help you to articulate your solution to potential customers

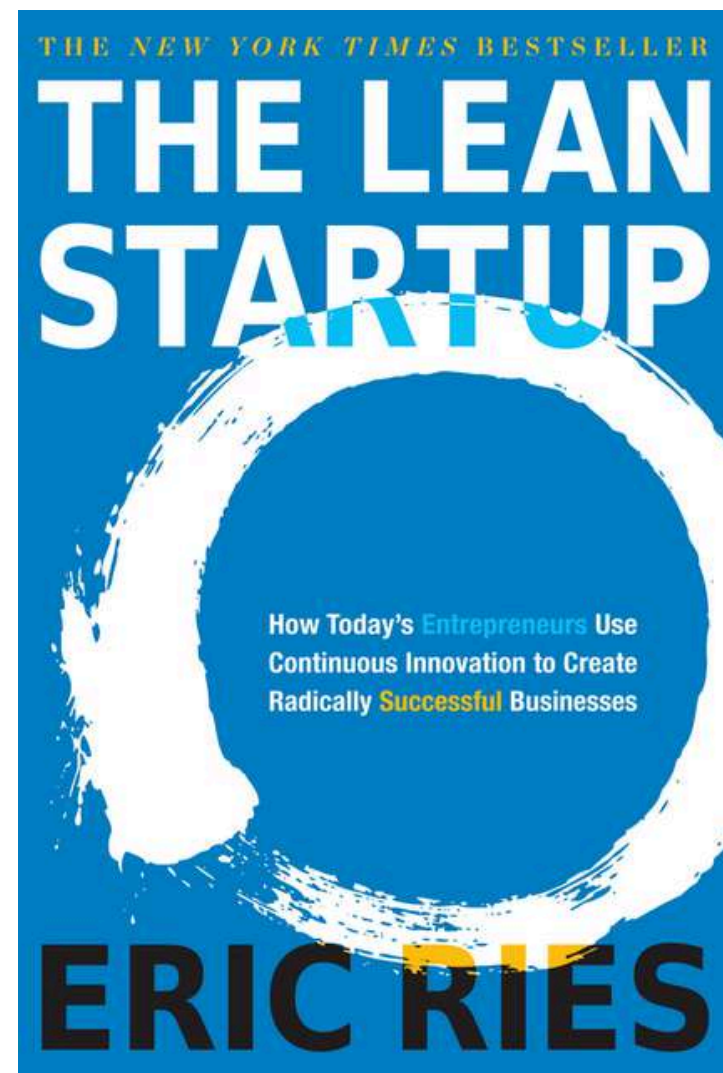

Test

Connect with your customers to validate your assumptions and determine product-market fit

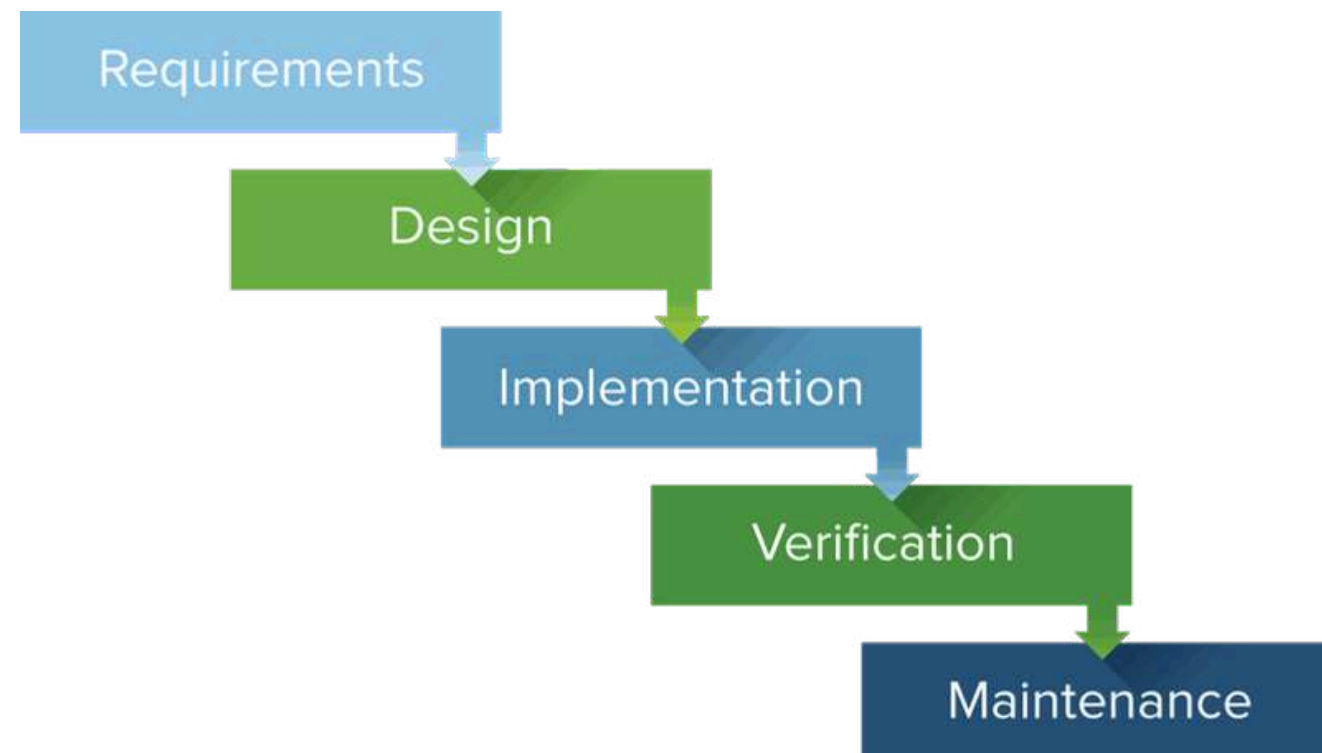

Lean Startup Methodology

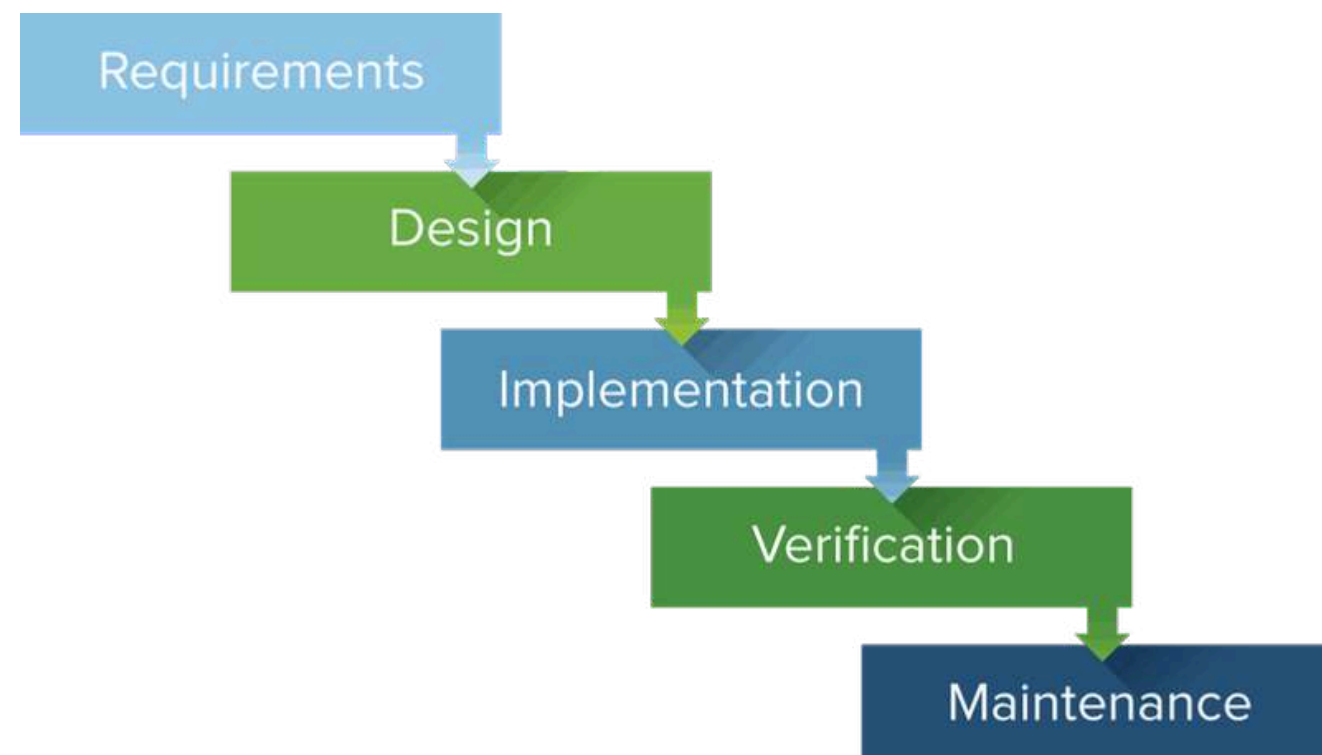

The methodology emphasizes **validating ideas through experimentation** before committing extensive resources to product development.

The Waterfall Method

This model required businesses to invest a large amount of time and money to develop a full-featured product without validating the market demand first.

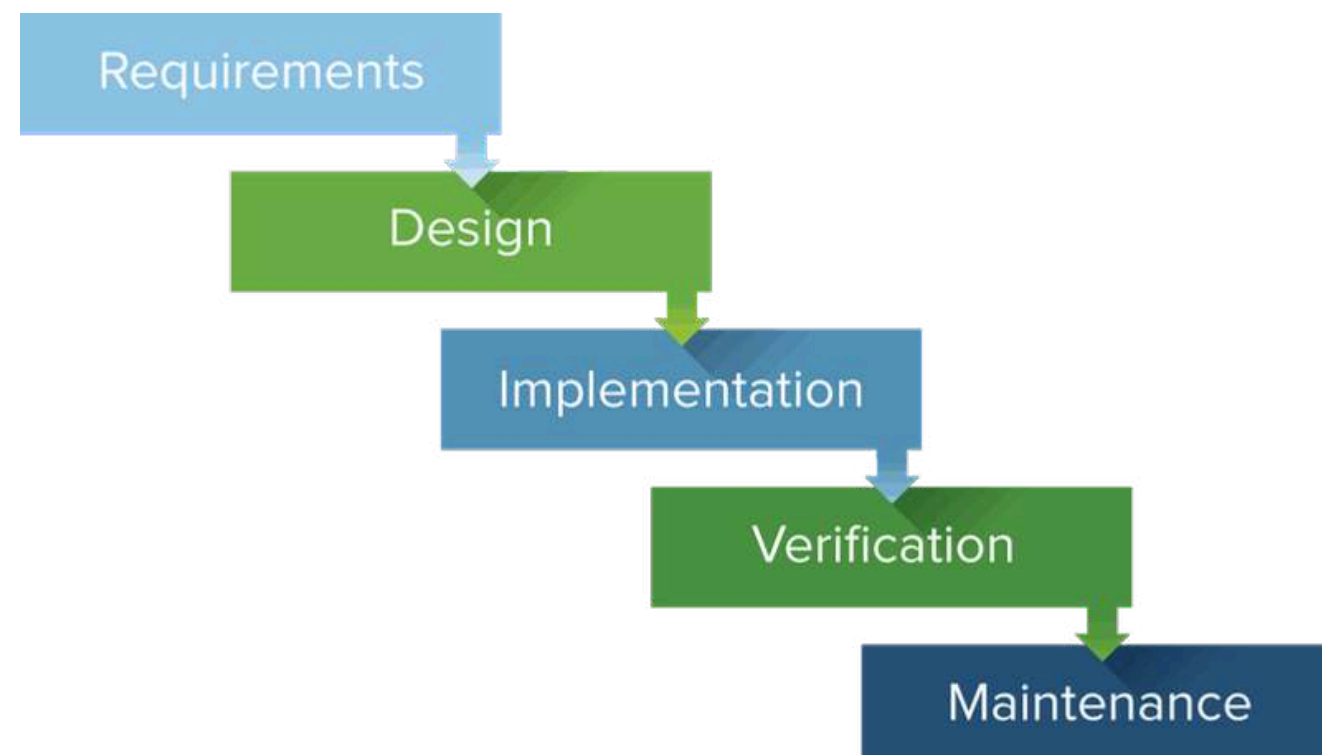

The Waterfall Method

Challenges with Traditional Product Development

- **High upfront costs:** It could cost hundreds of thousands or even millions to develop a product fully, including hiring a large team of developers, product managers, and marketing teams.
- **Time-consuming:** Developing a product could take 12-18 months or more.
- **Uncertainty of product-market fit:** Many products failed upon launch because their assumptions about the market needs were wrong, leading to wasted time and investment.

The Waterfall Method

Estimated Costs (Traditional Approach):

- **Development cost:** \$500,000 – \$1,000,000+ (for building a fully functional software).
- **Time to market:** 12-18 months.
- **Marketing & distribution:** Additional \$100,000 – \$500,000.
- **Risk:** High, as the market feedback comes only after the full product is developed, increasing the chance of failure if assumptions are incorrect.

What is Lean Startup?

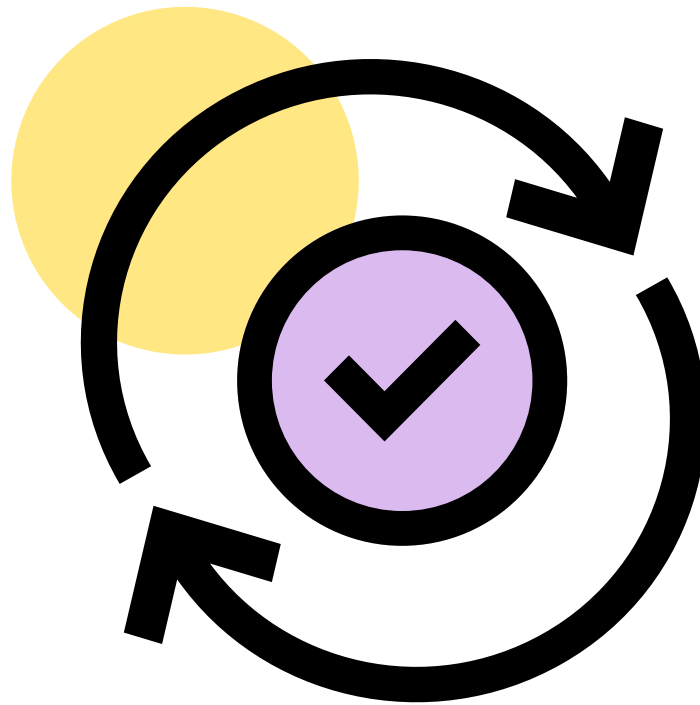

Definition: A methodology for developing businesses and products that aim to shorten product development cycles and quickly discover if a proposed business model is viable.

Key Concepts:

- Build-Measure-Learn: A cycle focused on creating products, gathering feedback, and iterating.
- Validated Learning: Experimentation and data-driven decisions.
- Pivot or Persevere: Deciding whether to continue with a strategy or change direction.

The Lean Startup Process

- **Build an MVP:** Develop a bare-bones version of your product to test the market's reaction. This version is cheap and fast to build.
- **Test the MVP in the market:** Gather feedback from real users to understand their pain points, what works, and what doesn't.
- **Iterate based on feedback:** Use the insights to make improvements to your product, and test again. Continue this loop until you've refined your product to fit the market needs.
- **Scaling and building the final product:** Once you've validated the core idea, build out the remaining features, knowing there's a market fit.

What do you think they made for their MVP?

Lean Startup Methodology

How much do you think they raised?

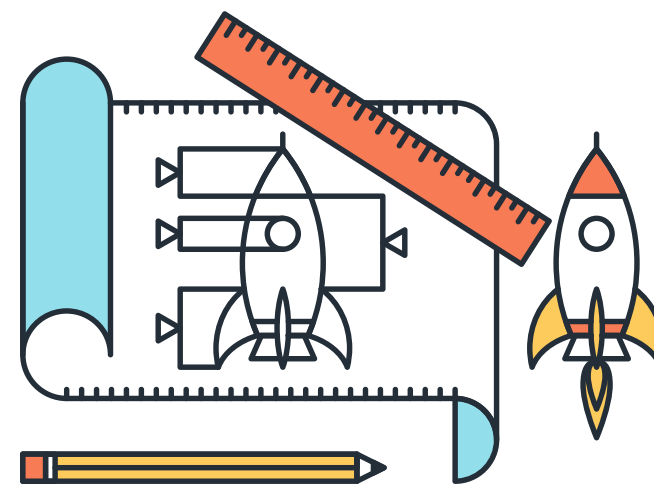

\$48,000,000

[Dropbox Raised \\$48,000,000 With Their Explainer Video. Here's How You Can Do The Same For Your Startup! - MotionCue](#)

Minimum Viable Product (MVP)

Understanding MVP

- Definition: The simplest version of a product that allows you to test hypotheses and validate a business idea with minimal resources.
- Purpose: To reduce waste, avoid building unwanted features, and accelerate learning.

Minimum Viable Product (MVP)

Characteristics of a Strong MVP

Key Elements:

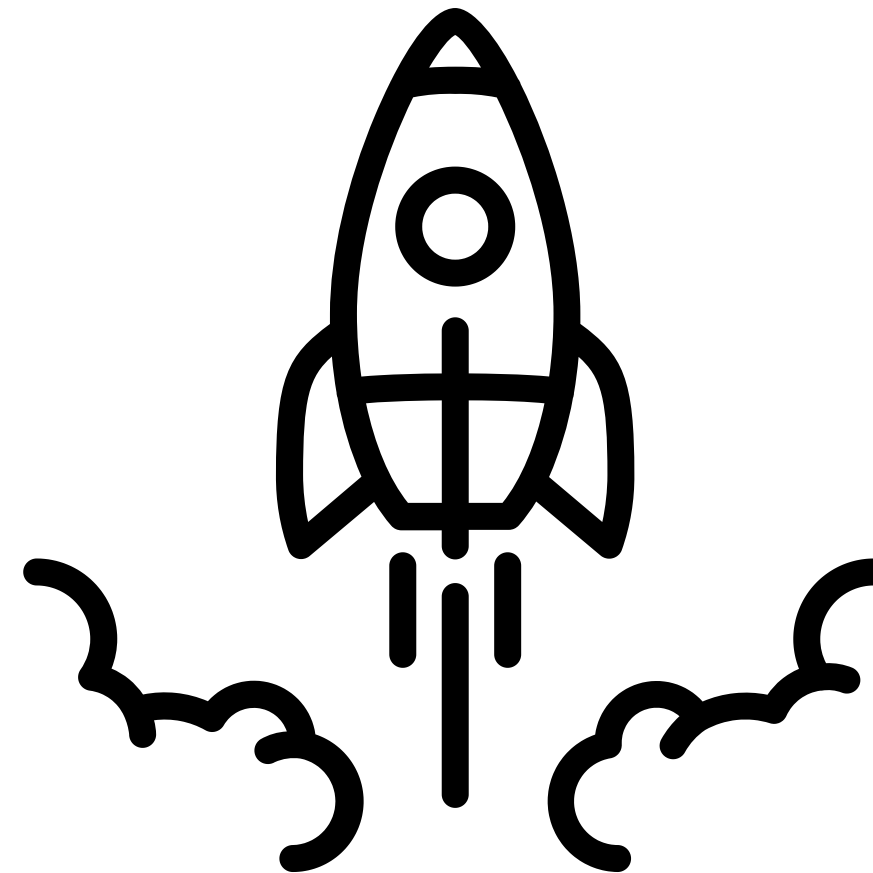

- Core Functionality: Focus on essential features.
- Customer Feedback: The foundation for iteration.
- Scalability: Should provide a basis for future growth.
- Example: New listings for real estate agent

Minimum Viable Product (MVP)

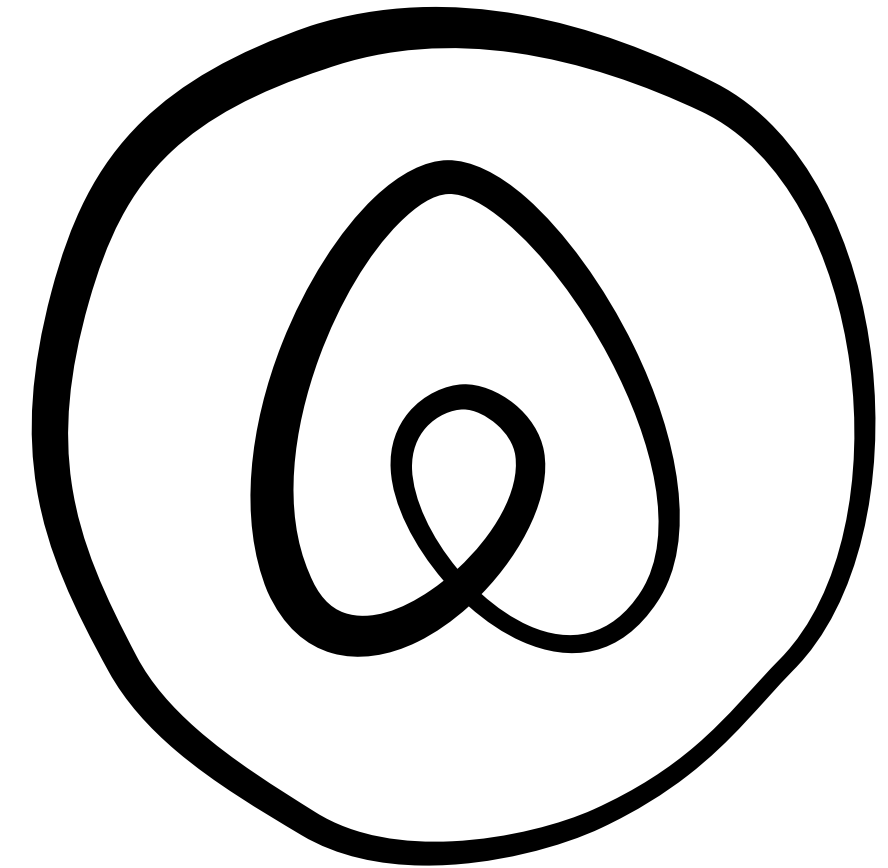

Types of MVPs

- Landing Page MVP: Test interest with a simple web page.
- Explainer Video
- Infographic
- Wireframes

Case Study: Airbnb's MVP

- Story: How Airbnb started by renting out air mattresses in their apartment.
- Lesson: Importance of starting small and testing the market before scaling.

Minimum Viable Product (MVP)

Class Activity

What would the MVP vs the finished product for a Real Estate Assistant look like? The assistant needs to send clients 10 new listings per day that meets their criteria.

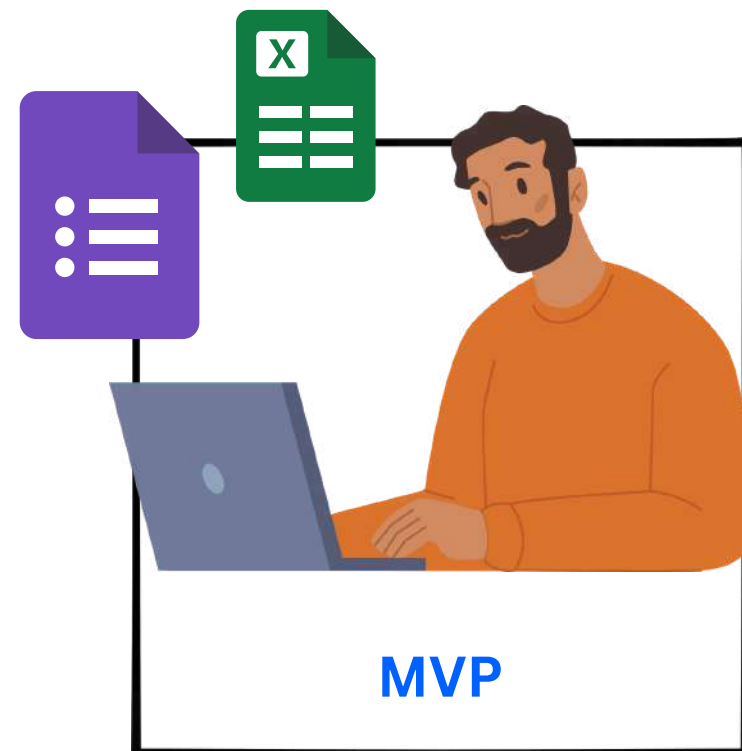

MVP

Finished
Product

Minimum Viable Product (MVP)

Class Activity

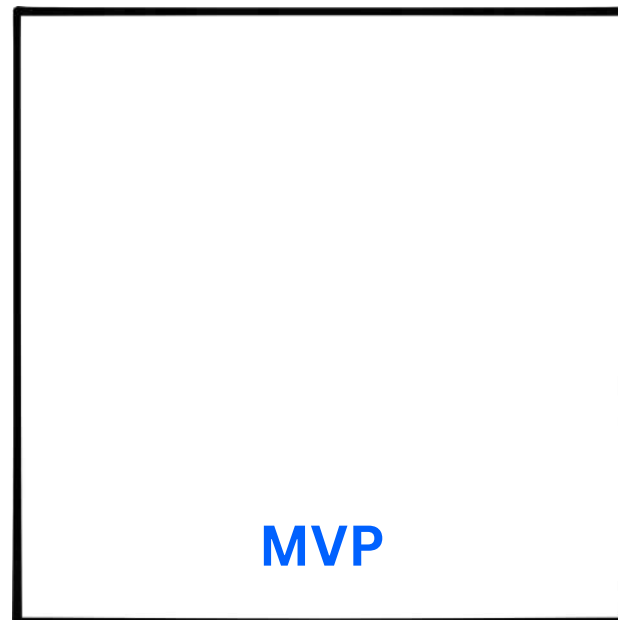

What would the MVP vs the finished product for a personal assistant business look like?

Minimum Viable Product (MVP)

Class Activity

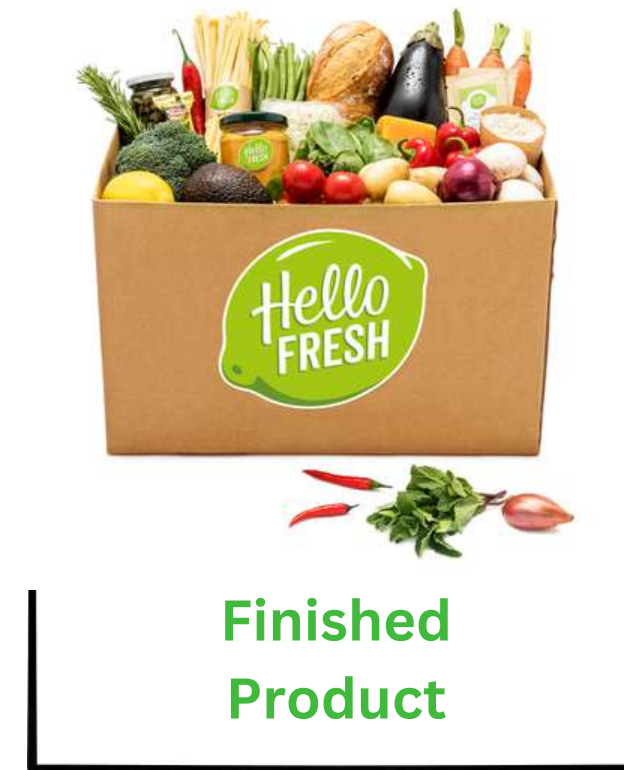

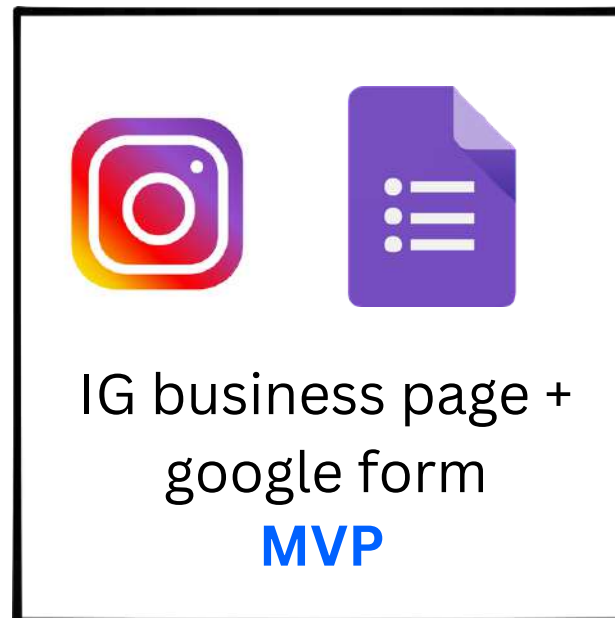

What would the MVP vs the finished product for a Meal Prep business look like?

What would the MVP vs the finished product for a Meal Prep business look like?

**But what about the capital required to start
the business?**

What is Bootstrapping?

- Definition: Launching and growing a startup using minimal external funding.
- Why It Matters: Encourages resourcefulness, creativity, and financial discipline.

Strategies for Effective Bootstrapping

Key Strategies:

- Cost Control: Keeping expenses low and avoiding unnecessary costs.
- Revenue Generation: Prioritize activities that generate immediate revenue.
- Leveraging Existing Resources: Utilize personal savings, relationships, and free tools.

Strategies for Effective Bootstrapping

Key Strategies:

- Cost Control: Keeping expenses low and avoiding unnecessary costs.
- Revenue Generation: Prioritize activities that generate immediate revenue.
- Leveraging Existing Resources: Utilize personal savings, relationships, and free tools.

MedaKi

In-Class Question: Bootstrapping vs. External Funding

What are the pros and cons of bootstrapping versus seeking external investment early on. Which would you prefer and why?

As you're developing your prototype, start thinking about cost and pricing.

Understanding Costs in a Startup

Types of Costs:

- Fixed Costs: Rent, salaries, utilities.
- Variable Costs: Production, shipping, marketing.
- One-Time Costs: Initial setup, equipment purchase.
- Importance: Proper cost management is crucial for financial sustainability.

Pricing Strategies Overview

Common Pricing Strategies:

- Cost-Plus Pricing: Markup added to the cost of the product.
- Value-Based Pricing: Based on the perceived value to the customer.
- Penetration Pricing: Low price to enter the market and attract customers.
- Skimming Pricing: High initial price, reduced over time.

How to Set Your Prices

Steps:

- Understand Your Costs: Fixed and variable.
- Analyze Competitors: Know what others are charging.
- Determine Customer Value: Assess what your target market is willing to pay.
- Select Pricing Strategy: Choose the best fit for your business model.

Case Study: Pricing in Action

Example: Apple's premium pricing strategy for the iPhone.

- Discussion: How Apple's brand and perceived value allow it to maintain higher prices.

Revenue Streams

The revenue streams represents the cash a company generates from each customer segment.

- For what value are our customers really willing to pay?
- For what do they currently pay?
- How are they currently paying?
- How would they prefer to pay?
- How much does each Revenue Stream contribute to overall revenues?

Revenue Streams

Asset Sales

The most widely understood Revenue Stream derives from selling ownership rights to a physical product. Amazon.com sells books, music, consumer electronics, and more online. Fiat sells automobiles, which buyers are free to drive, resell, or even destroy.

Usage Fee

This Revenue Stream is generated by the use of a particular service. The more a service is used, the more the customer pays. A telecom operator may charge customers for the number of minutes spent on the phone.

Subscription Fees

Generated by selling continuous access to a service. A gym sells its member monthly or yearly subscriptions in exchange for access to its exercise facilities.

Lending/Renting/Leasing

Created by temporarily granting someone the exclusive right to use a particular asset for a fixed period in return for a fee.

Revenue Streams

Licensing

This Revenue Stream is generated by giving customers permission to use protected intellectual property in exchange for licensing fees. Examples are found in the media industry and technology sector for patents.

Brokerage Fee

Derives from intermediation services performed on behalf of two or more parties. Credit card providers earn revenue by taking a percentage of the value of each sales transaction. Brokers and real estate agents earn a commission with each sale.

Advertising

Results from fees for advertising a particular product, service, or brand.

Pricing Mechanisms

Fixed Menu Pricing Predefined prices are based on static variables		Dynamic Pricing Prices change based on market conditions	
List Price	Fixed prices for individual products, services, or other Value Propositions	Negotiation (bargaining)	Price negotiated between two or more partners depending on negotiation power and/ore negotiation skills
Produce Feature Dependent	Price depends on the number or quality of Value Proposition features	Yield Management	Price depends on inventor and time of purchase (normally used for perishable resources such as hotel rooms or airline seats)
Customer Segment Dependent	Price depends on the type and characteristics of a Customer Segment	Real-time-market	Price is established dynamically based on supply and demand
Volume Dependent	Price as a function of the quantity purchased	Auctions	Price determined by outcome of competitive bidding

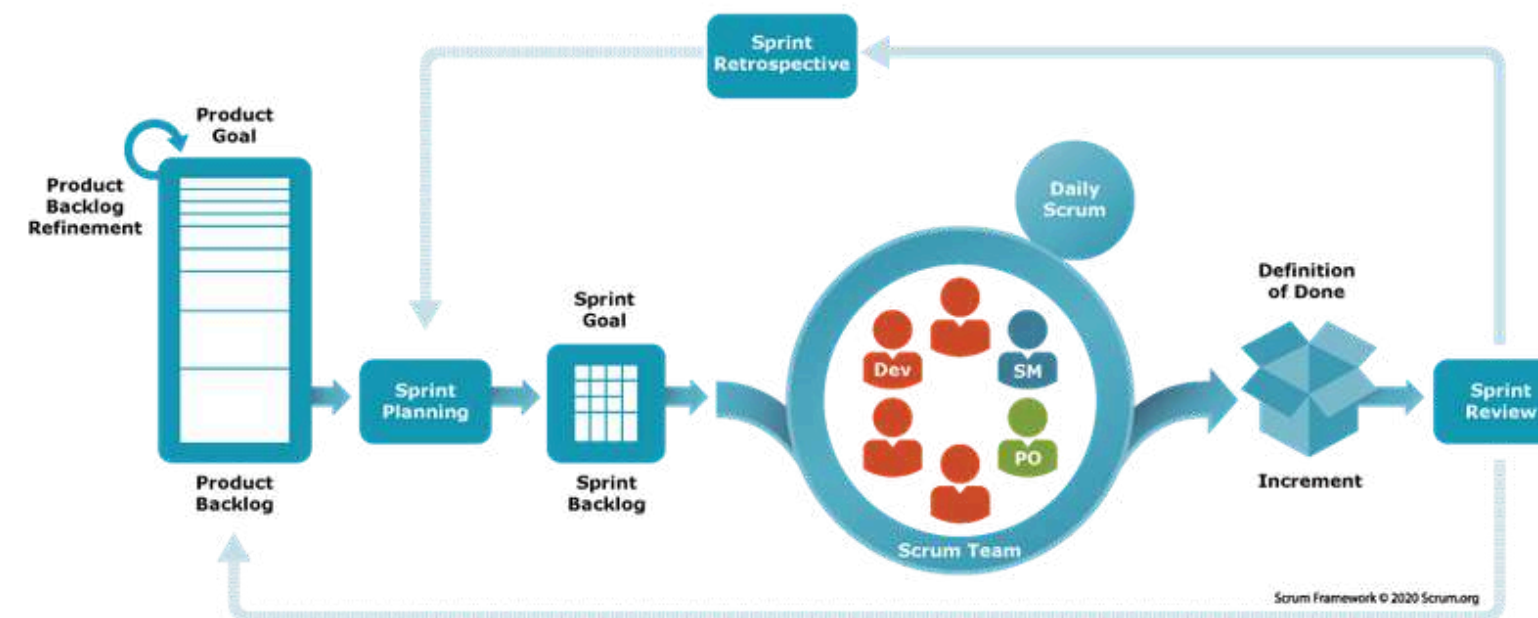

In-Class Question: Pricing Your Product (10 Minutes)

Find the same product available in each of these stores and compare pricing and value prop.

Introduction to SCRUM

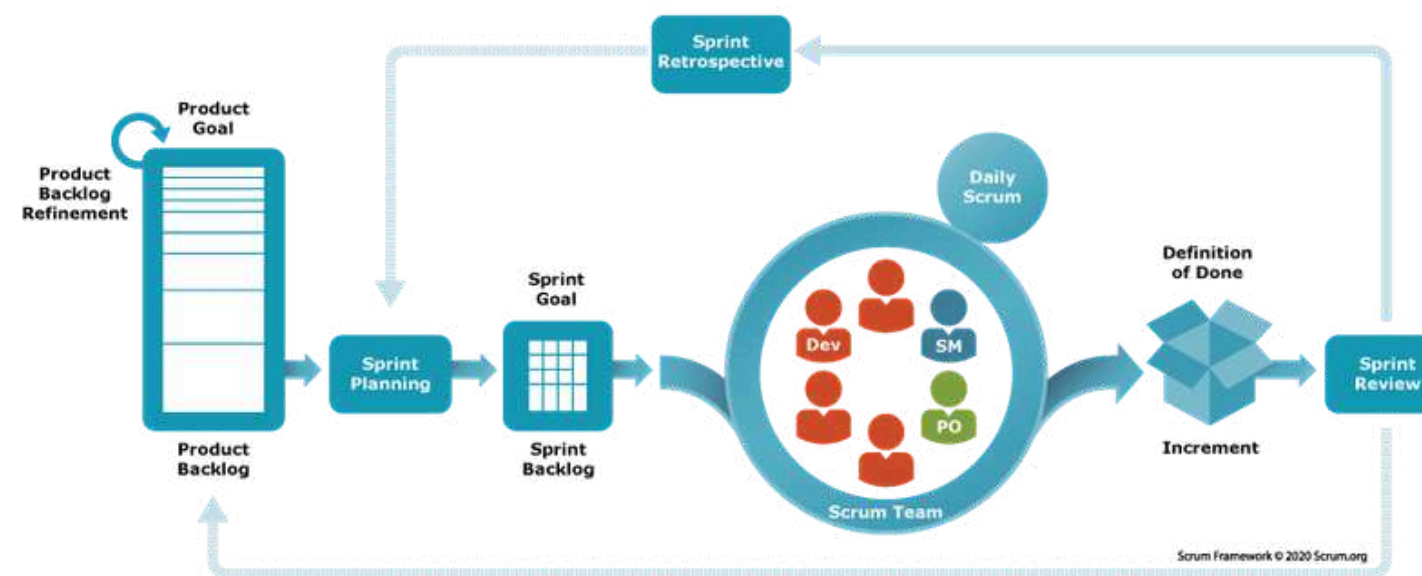

- Definition: An agile framework that helps teams work together to develop, deliver, and maintain complex products.
- Why SCRUM?: Encourages continuous improvement, flexibility, and quick adaptation.

SCRUM Roles

Key Roles:

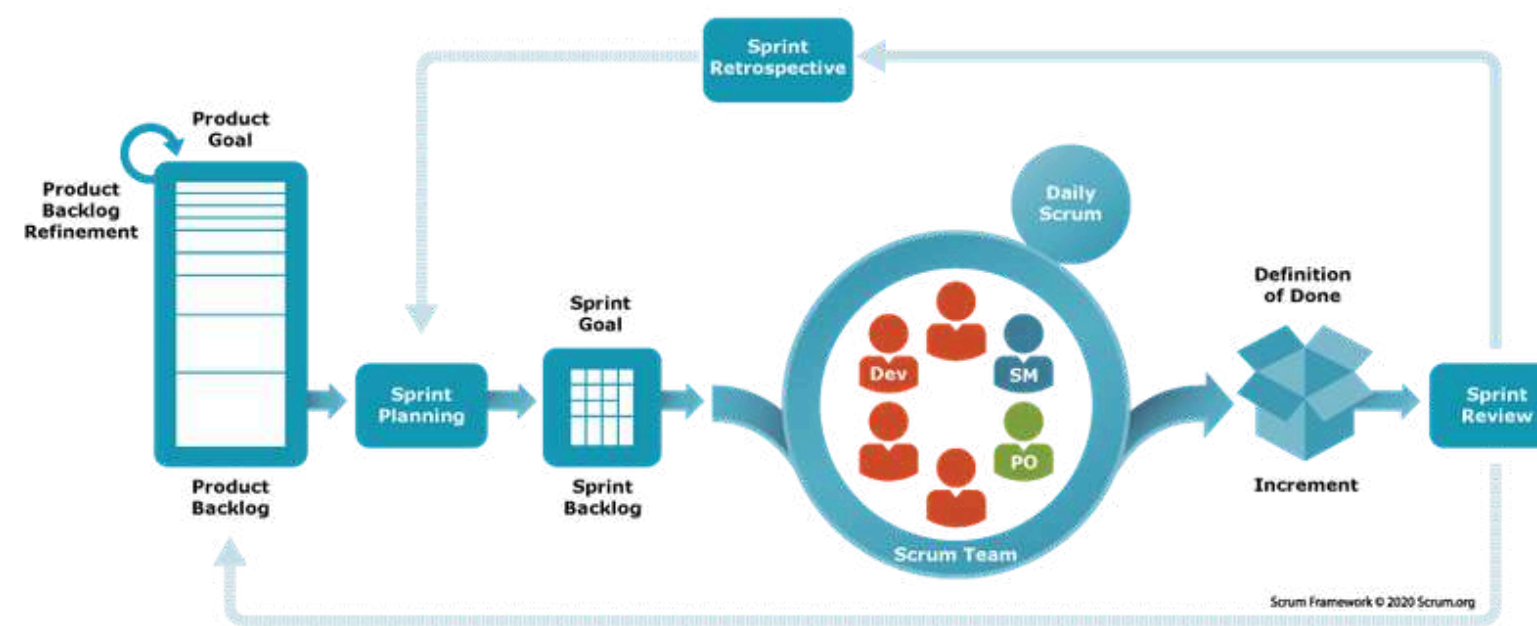

- Product Owner: Defines the product vision and prioritizes the backlog.
- Scrum Master: Facilitates the process, removes obstacles, and ensures adherence to SCRUM practices.
- Development Team: Cross-functional group that delivers the product increment.

SCRUM Artifacts

Key Artifacts:

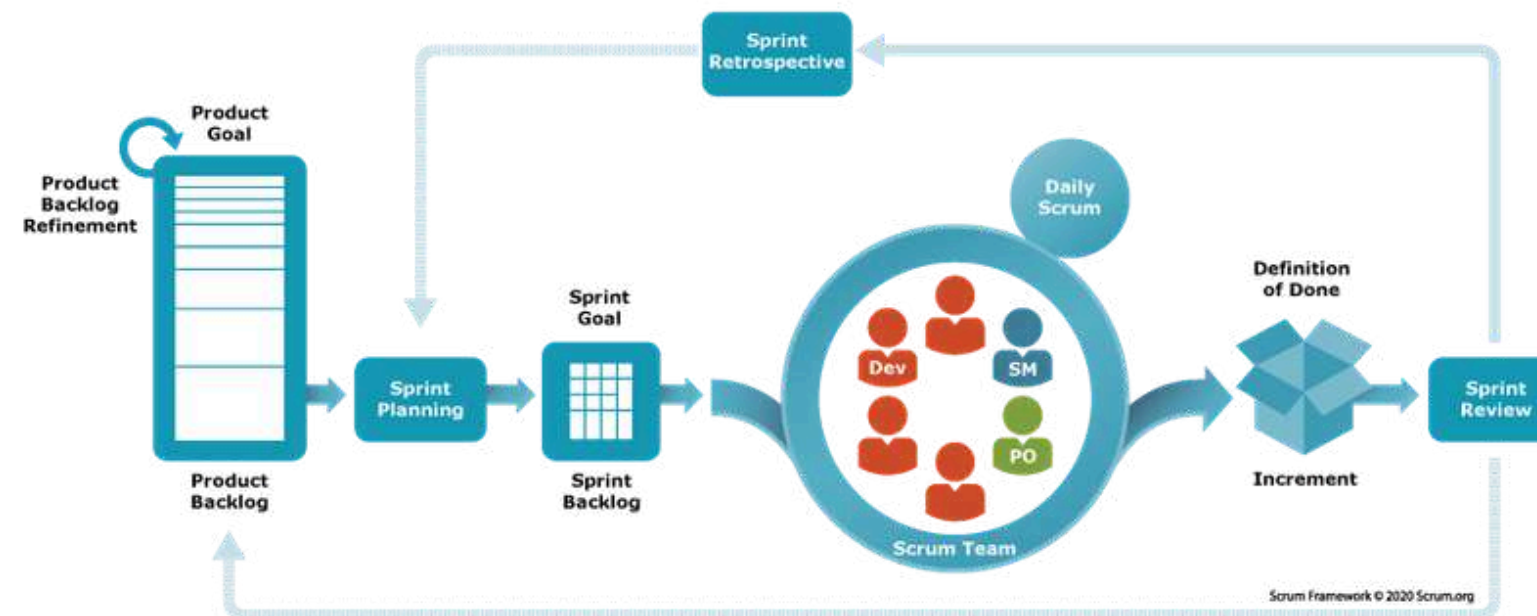

- Product Backlog: A prioritized list of work for the development team.
- Sprint Backlog: A list of tasks to be completed during the sprint.
- Increment: The sum of all the product backlog items completed during a sprint.

SCRUM Events

Key Events:

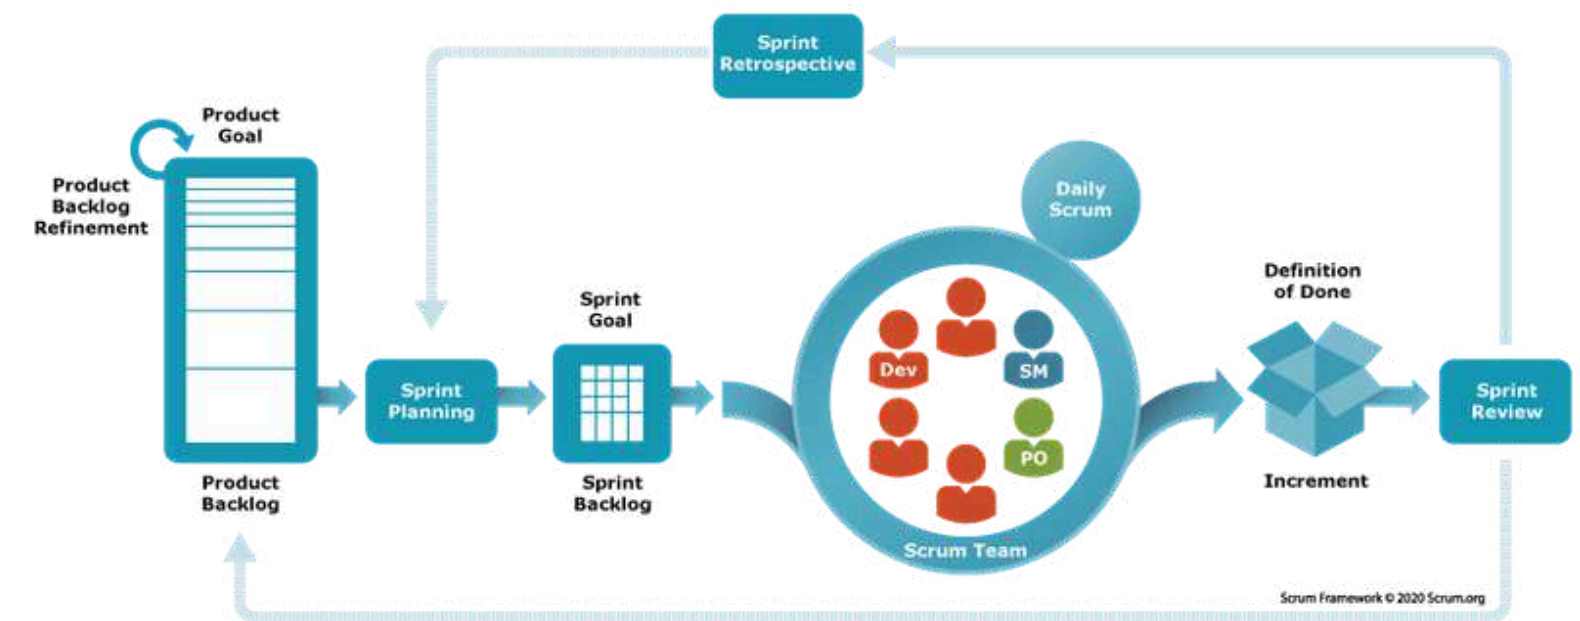

- Sprint Planning: Define what will be delivered in the upcoming sprint.
- Daily Stand-up: Short daily meeting to sync up the team.
- Sprint Review: A meeting to demonstrate the increment to stakeholders.
- Sprint Retrospective: Reflect on the sprint and identify areas for improvement.

SCRUM Example

Key Events:

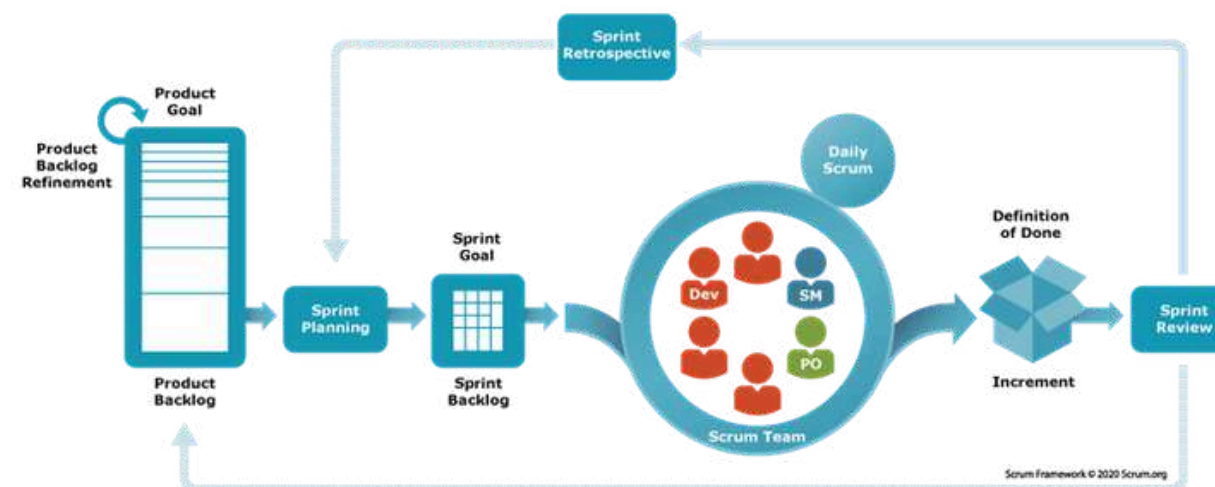

- Product Goals: Setup a website
- Product backlog:
 - Find the best option (WIX, Squarespace, etc.) - 3 hours
 - Create the account - 1 hours
 - Plan the content (text) - 2 days
 - Create the images/assets - 2 days
 - Create a basic wireframe - 1 day
 - Install required features - 1 day
 - Setup payment processor - 8 hours

In-Class Activity: SCRUM (10 Minutes)

Activity: Use Scrum for your own business.

- Create a list of 3 high-level goals for the next few weeks
- Break them down into smaller S.M.A.R.T (specific, measurable, attainable, realistic, time-bound) Goals
- This could be setting up a website, creating a wireframe, creating a specific feature, posting products, achieving a sales goal, implementing a new analytics tool, completing specific research, etc.
- For **InnWIL students**, create S.M.A.R.T goals for prototyping/implementing/testing your proposed solutions

Case Study: SCRUM at Spotify

- Story: How Spotify scaled its development process using SCRUM.
- Lesson: The importance of autonomy, alignment, and continuous improvement in a fast-growing startup.

[The Spotify Model for Scaling Agile | Atlassian](#)

Integrating Lean Startup with SCRUM

- Synergies: How Lean Startup principles align with SCRUM practices.
- Practical Tips: Using SCRUM to build and iterate on MVPs efficiently.
- Discussion: Examples of startups that successfully integrate both methodologies.

**KEEP CALM
and
VALIDATE**

**Have you ever pre-ordered a
product? Why?**

Customer Validation is about making sure that your idea, personas, research on who you are trying to help - and in turn your BMC - is correct.

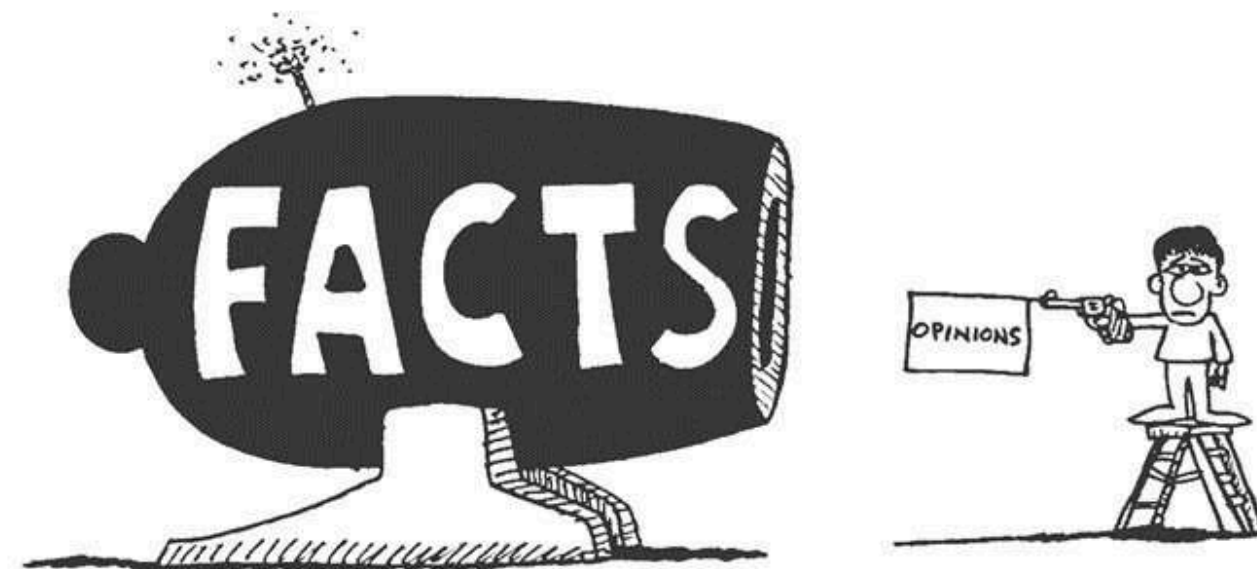

It is the necessary process of turning assumptions about the market into facts.

Customer Validation

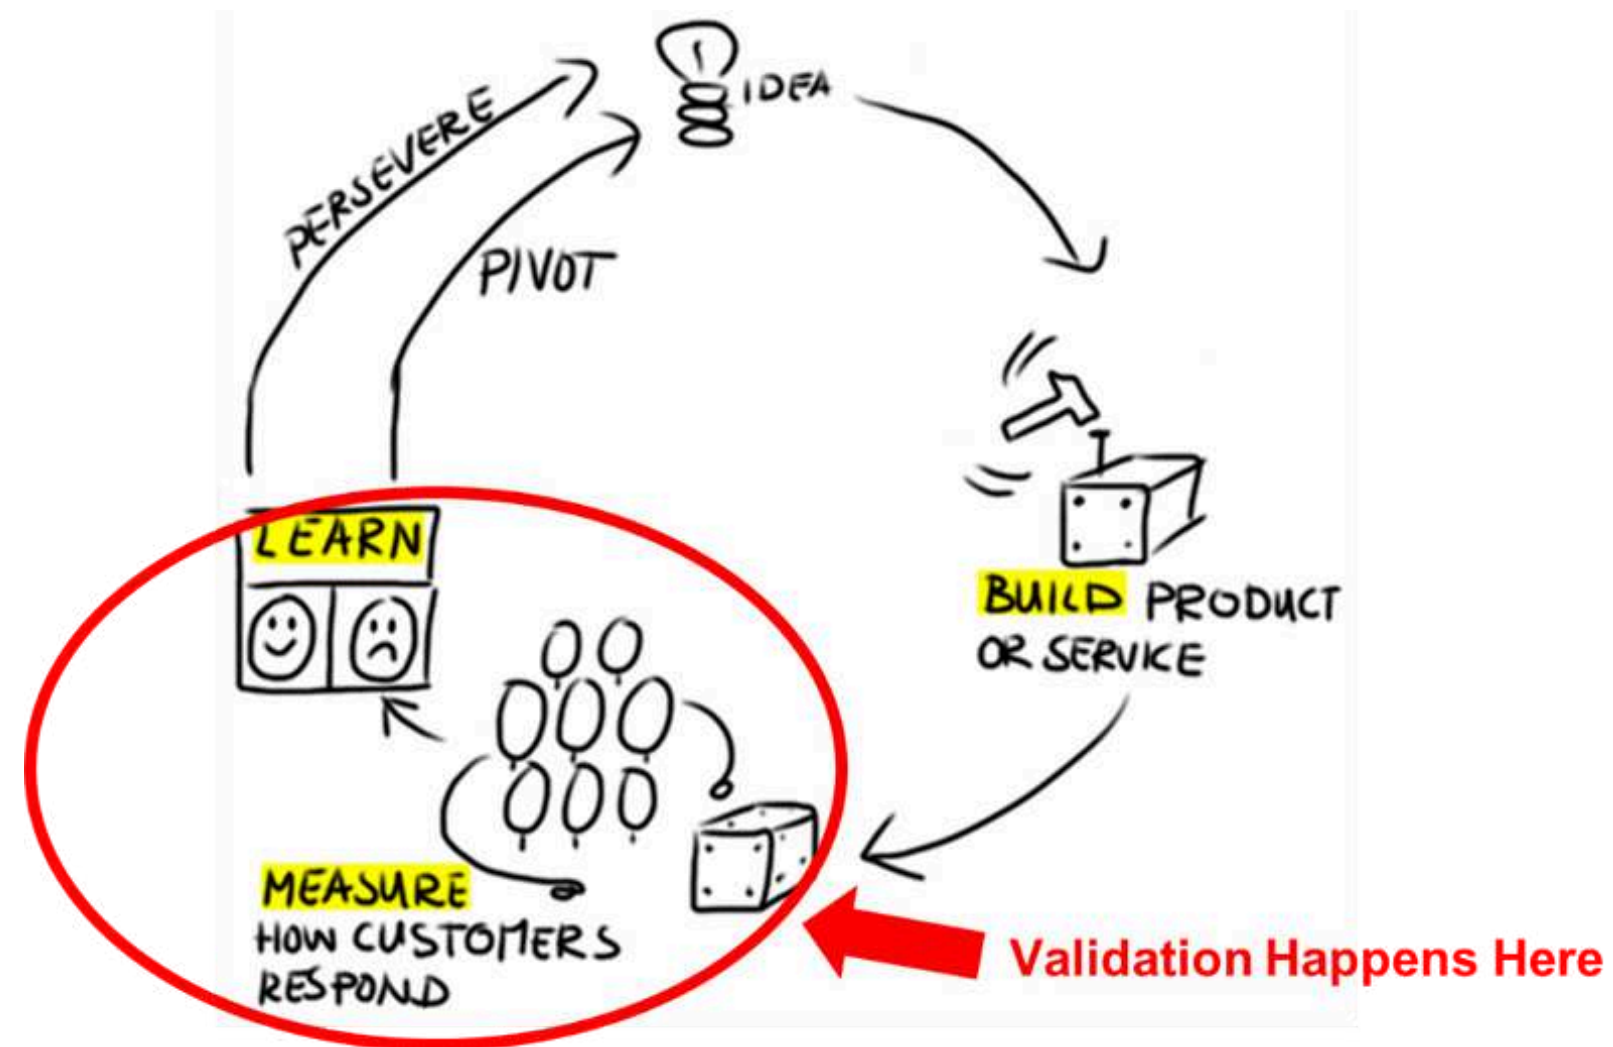

Facts, not opinions, will get you customers.

Facts, not opinions, will generate revenue.

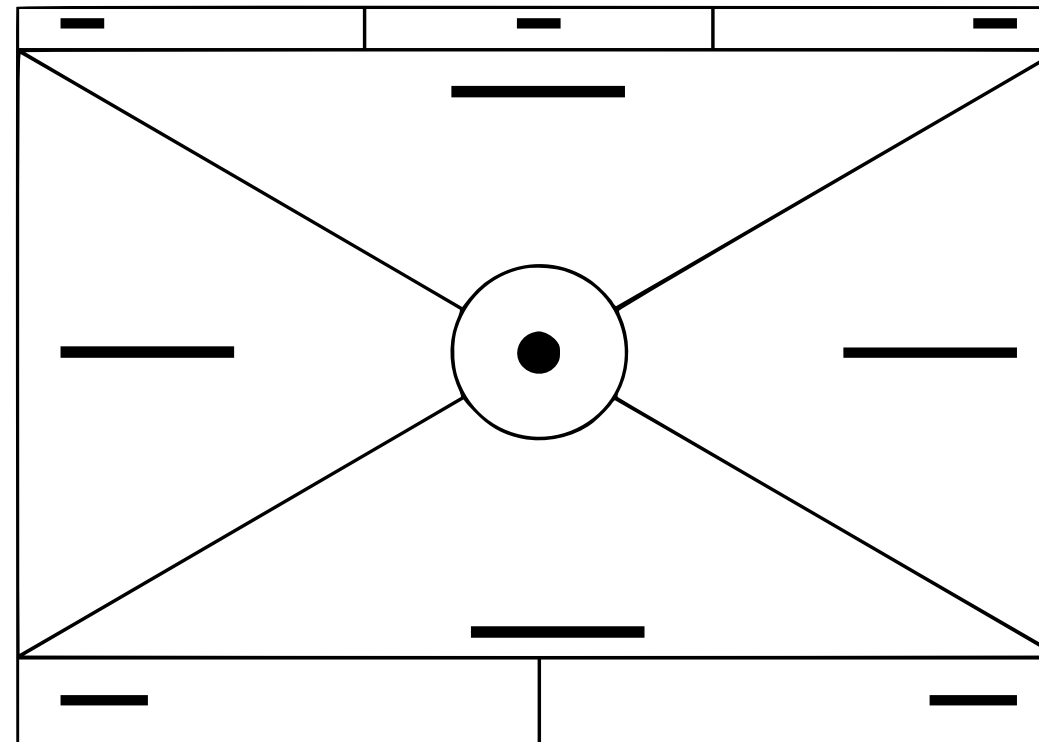

Facts, not ideas, will propel you forward.

Customer Validation

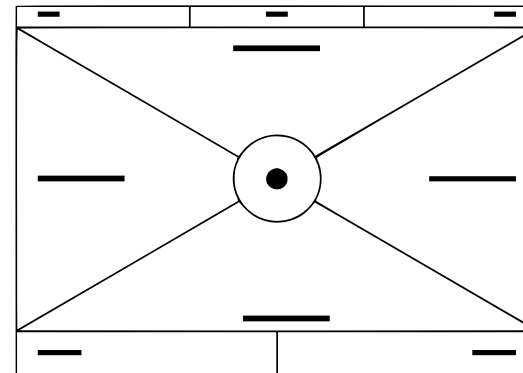

Empathy Map

An empathy map is a tool used to gain a deeper insight into the needs of your target customer; this includes their aspirations, beliefs and world views, as well as what they see, hear, think, feel on a regular basis.

Empathy Map

Visualizing Data

The map is divided into four quadrants:

Says, **Thinks**, **Does**, and **Feels**

These quadrants capture different aspects of the user's experience:

Says: Direct quotes from the user.

Thinks: What the user is thinking but might not say out loud.

Does: Actions and behaviors observed.

Feels: Emotions and feelings inferred from the user's behavior and statements.

businessmodelanalyst.com

Empathy Map

Synthesizing Insights: By organizing data into these quadrants, you can identify patterns and insights that might not be obvious from raw data alone. This helps in making informed design decisions.

Enhancing Communication: A visual tool that can be shared with stakeholders to ensure everyone has a common understanding of the user.

Identifying Opportunities: They help in pinpointing gaps in the user experience and areas where improvements can be made. This can lead to innovative solutions and better user satisfaction.

Empathy Map

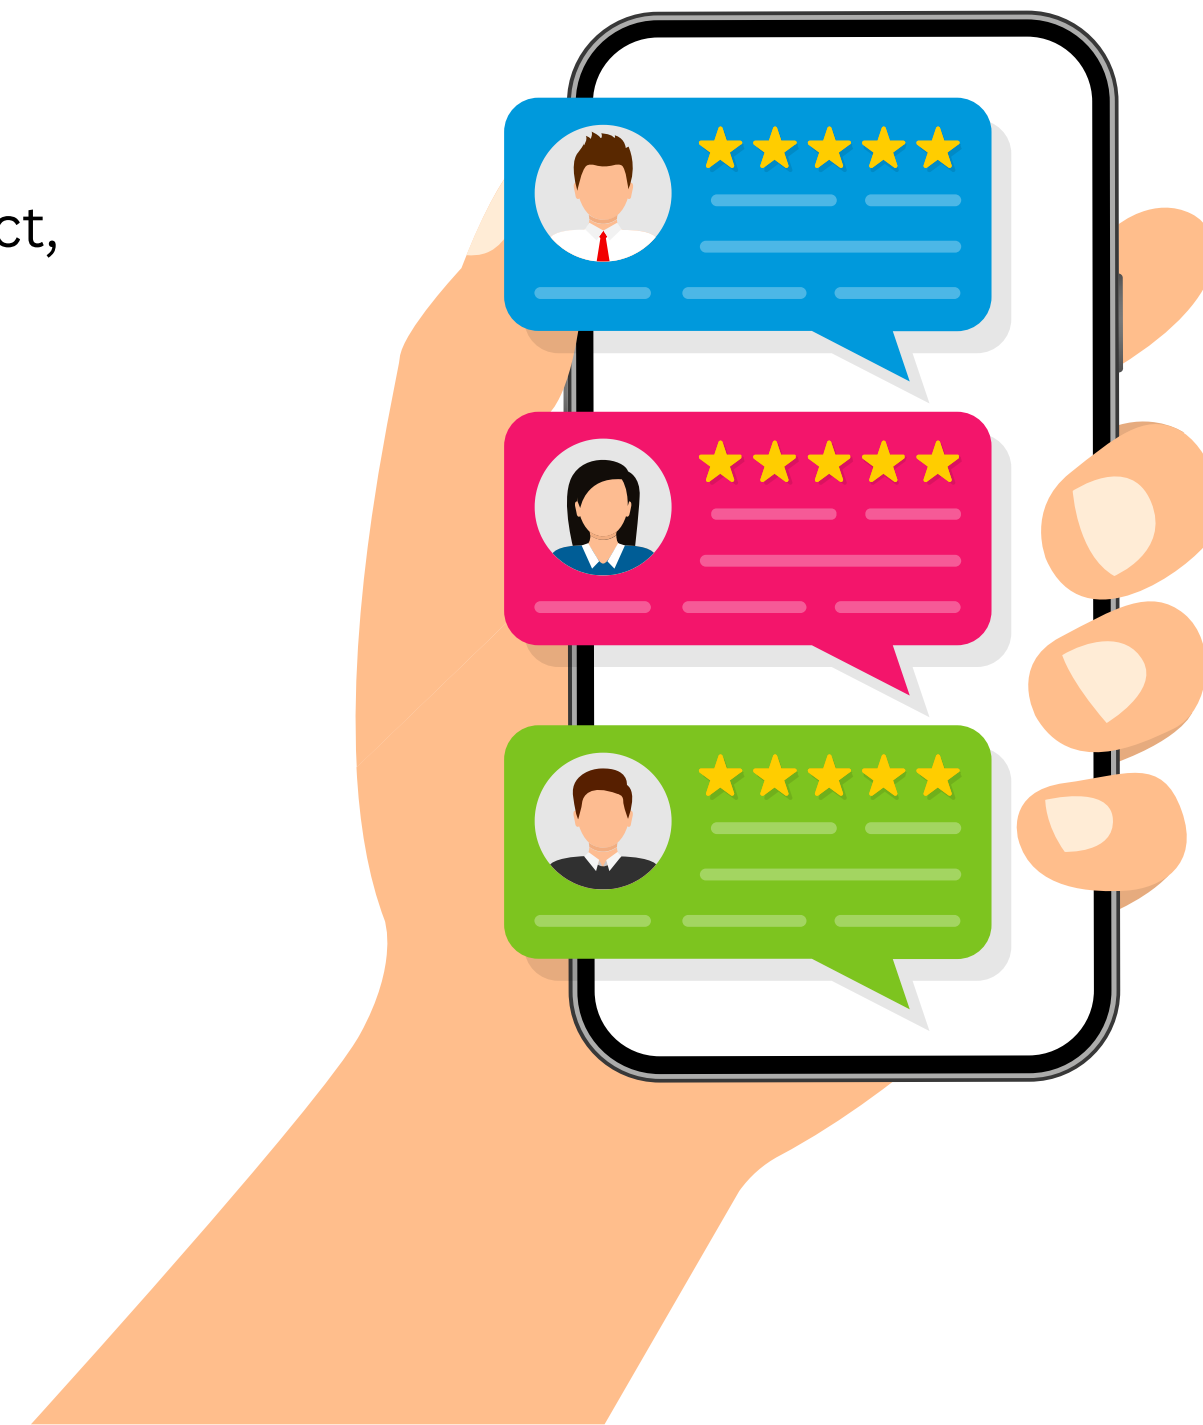

Getting Customer Feedback

Getting and incorporating actual customer feedback on your product, business model and solution-fit is very important.

How your idea, BMC & product get refined. This is how you Grow!

Can't stress enough how important this is.

Getting Customer Feedback

“The ability to ask the right question is more than half the battle of finding the answer.”

Thomas J Watson

Getting Customer Feedback

What you want to know:

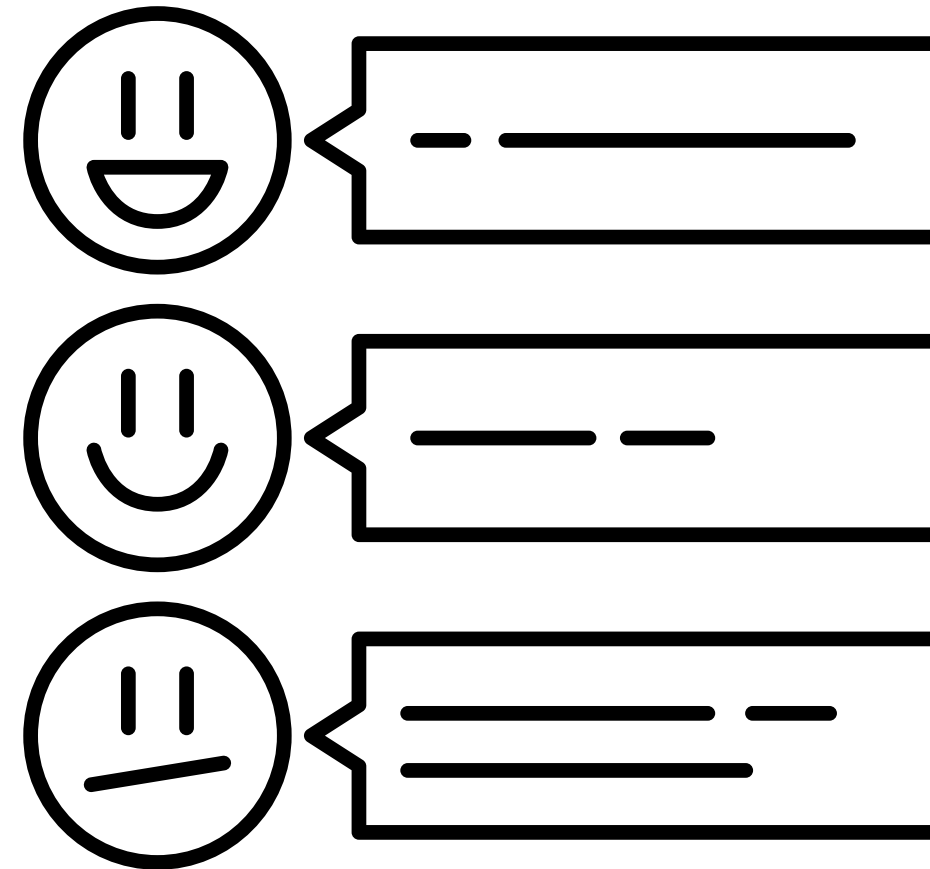

What do they like?

What didn't they like?

Did it do the job/solve the problem?

Would they recommend it to a friend?

How much would they pay for it?

Getting Customer Feedback

Primary Research

Any research that you conduct yourself.

Examples

- Surveys (quick, great for lots of people)
- Individual Interviews (in-depth)
- Observation
- Focus Groups

Getting Customer Feedback

Secondary Research

Involves compiling existing data sourced from a variety of channels. Includes internal sources (e.g. in-house research) or, external sources (such as government statistics, organizational bodies, and the internet).

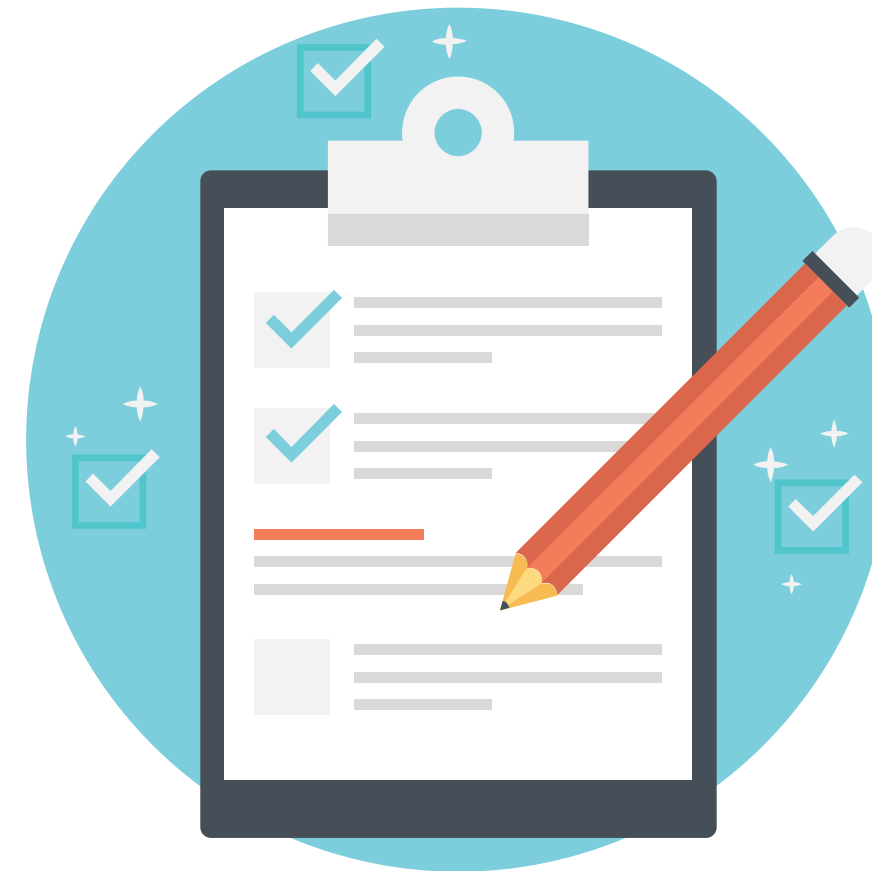

Keep the survey short (max 12 questions).

Resist the urge to ask complex questions (ie: ranking question).

If possible, embed survey in your product.

You need as many survey responses as you can get so that you have meaningful data to analyze (and to impress investors!)

Surveys

Like Scale
On a scale of 1-5,
1=not important, 5=extremely important, rate the following product features.

How much value do you believe this product would bring you in a year \$5, \$50, \$500, \$5,000,\$50,000...?

In its current form, would you recommend this product to a friend?

Surveys

How likely are you to recommend this product to others (1=never, 5=in a heartbeat)

What is the top thing you would improve about our product/service?

What is the top thing you would improve about your overall experience with us?

On a scale of 1-5 (1-Poor, 5-Excellent), please rate the following:

Ease-of-Use

Value for Money

Customer service

Which features were most valuable to you?

What important features were missing?

How does this product compare to similar or competing products/solutions?

What problem(s) were you hoping to solve by using our product?

How successful was our product in solving the problem(s)?

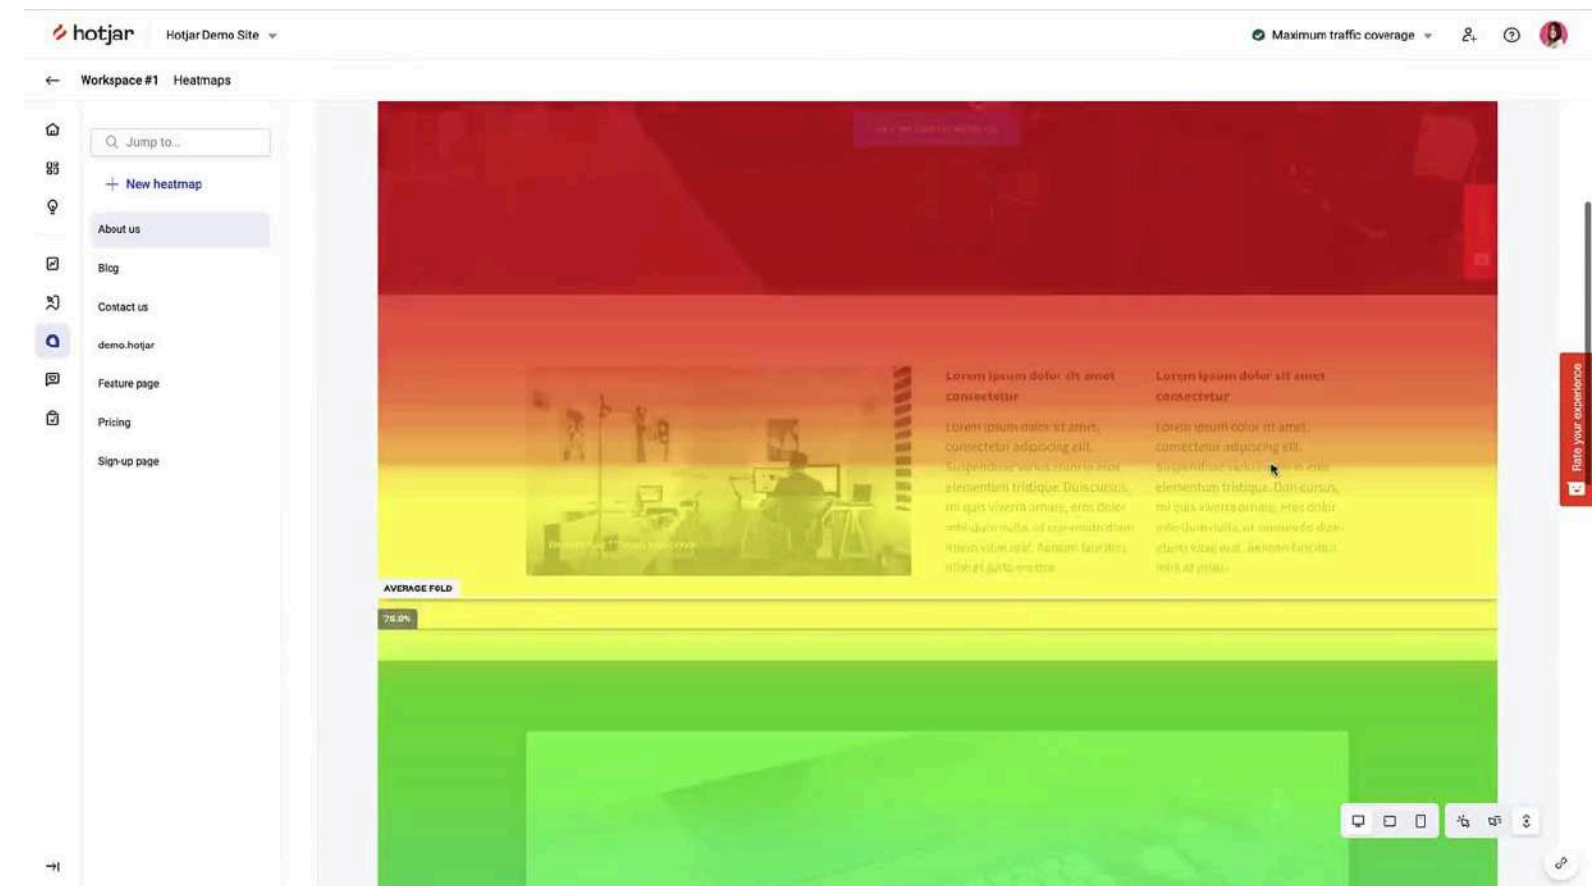

hotjar

Heatmaps

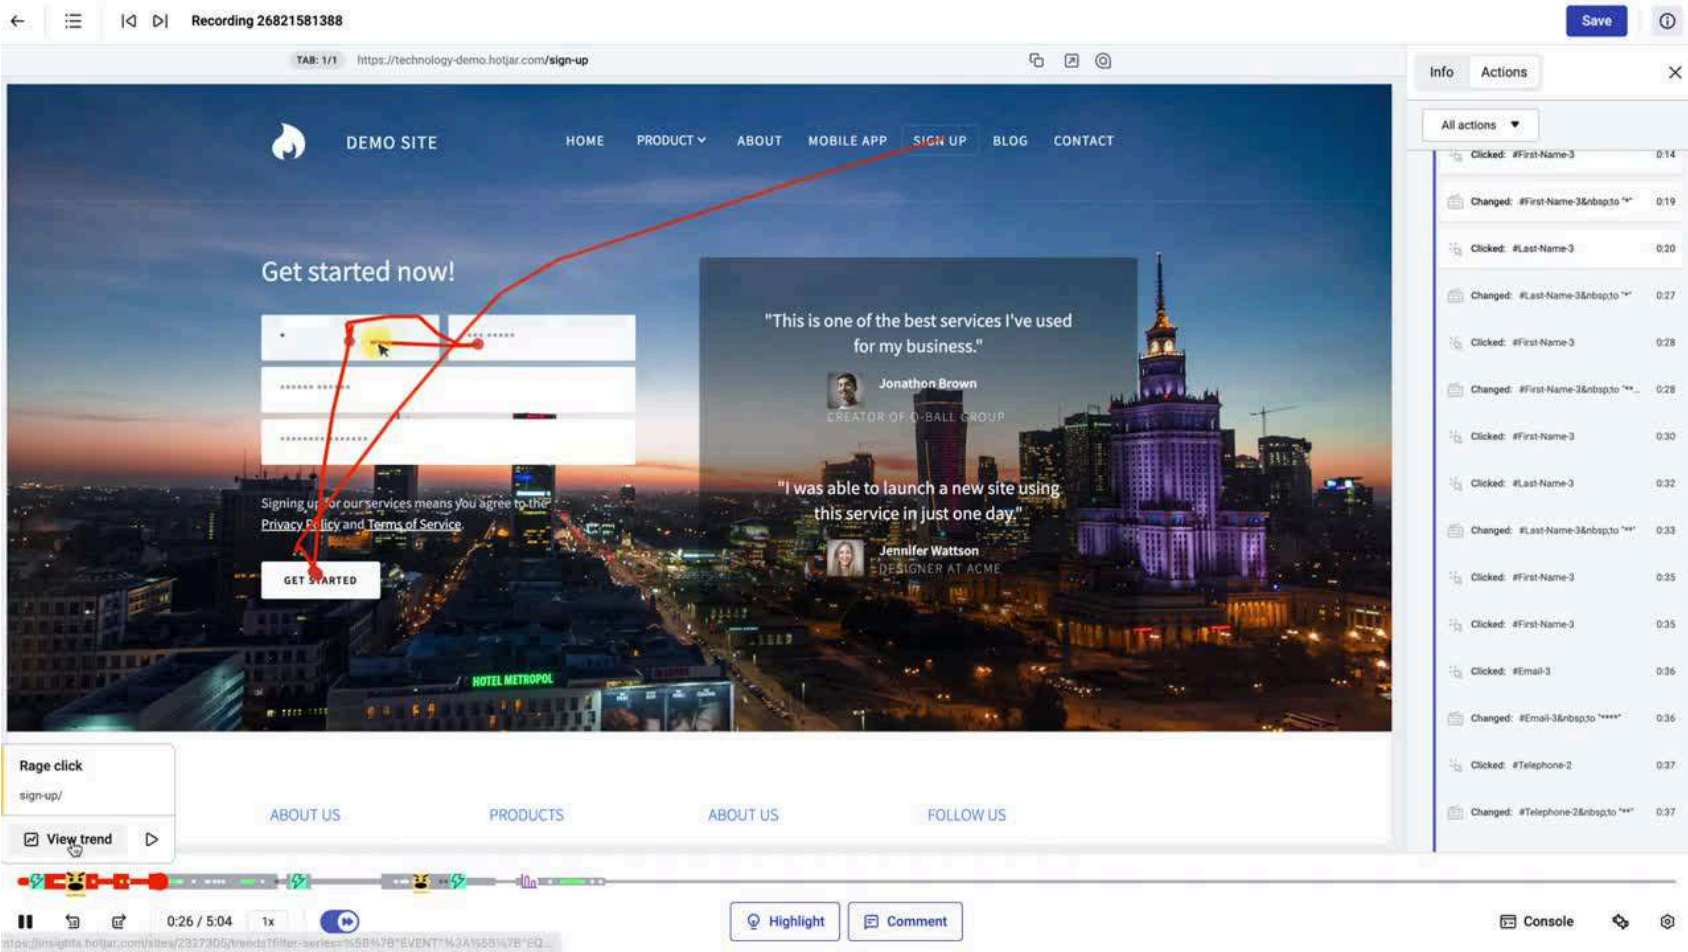

Improve any page of your site with confidence. See which parts of the page get ignored, and which elements drive sales and signups.

Recordings

See exactly what your users see. Watch real user sessions to find and fix hidden friction and conversion blockers.

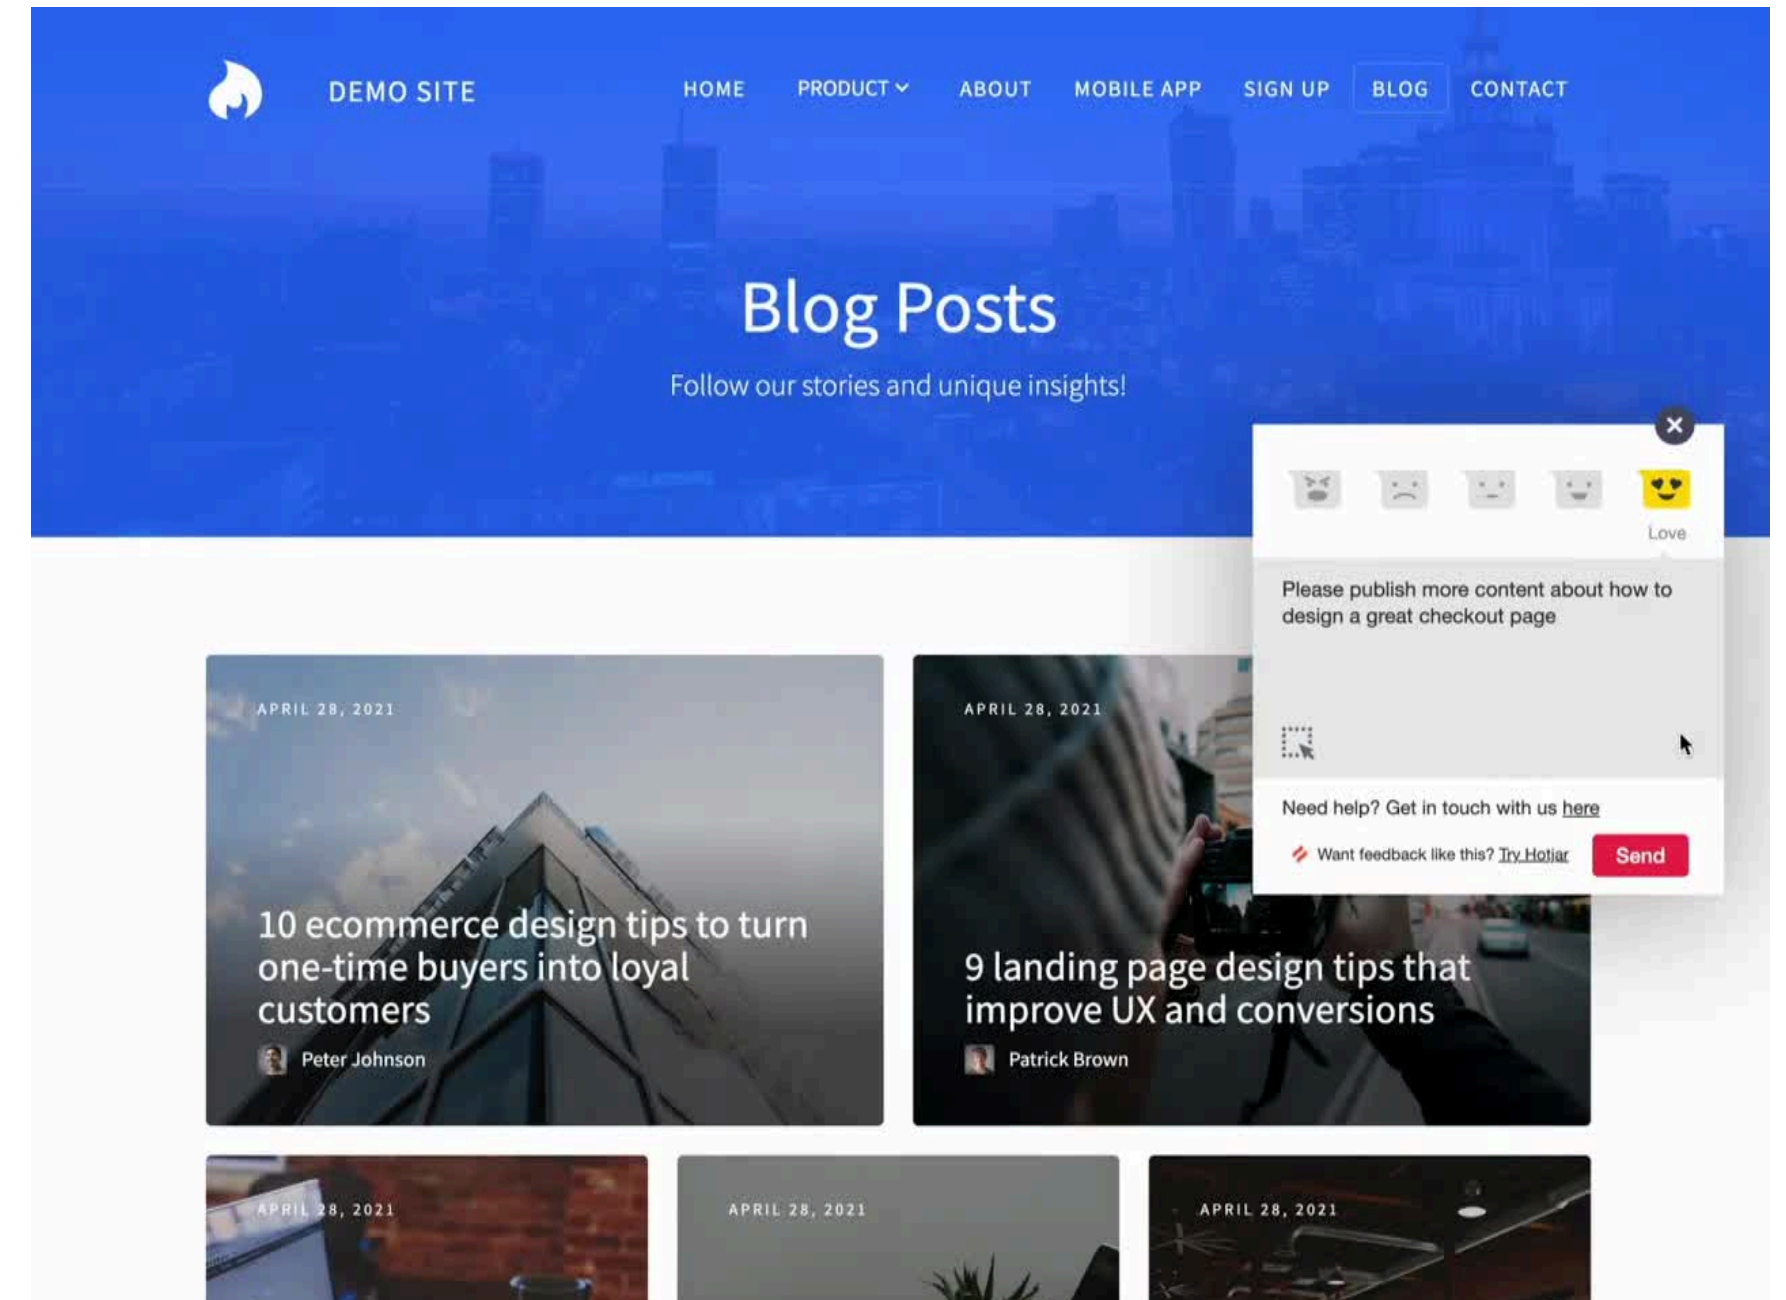

Hotjar

Seneca
POLYTECHNIC

Feedback

Hear directly from your users as they experience your site. Find out what they love, and what's driving them off your site. Make the changes that matter.

Seneca
Seneca HELIX
POLYTECHNIC

Surveys

Bring your customer voice to your decision-making. Validate your plans, measure customer satisfaction, and learn from every churn.

A screenshot of the Hotjar 'Create a new survey' interface. The interface is divided into three main sections: 'Details', 'Type', and 'Questions'. The 'Questions' section is currently active, showing a question editor. The question is 'On a scale of 1-5, how smooth was the checkout flow?'. The question type is set to '1 - 5 Rating scale'. There are options to make the question 'Required' (checked) and to 'Add image'. Below the question, there are fields for 'Low score label' (set to 'Not smooth') and 'High score label' (set to 'Very smooth'). At the bottom, there is a section for 'After this question, go to:'. On the right side of the interface, there is a 'Preview' button and a 'Question Bank' button. A 'Reset' button is also visible. The interface is clean and modern, with a light blue and white color scheme.

Interviews

Connect 1 to 1 with users to test hypotheses, and prototypes, refine designs, and iterate on ideas faster.

Let's try a longerSend

Elevator Pitch

1-on-1 conversation with a potential customer
(in-person or virtual)

30-40 minutes

Different to a survey

Active listening

Interviewing Customers

It's not a sales presentation!

Resist the urge to defend your product.

Listen. Listen. Listen. Then listen more.

People always try to be nice so you have to create a safe environment for them AND ask them to say what's really on their mind.

Use Open-ended Questions.

Interviewing Customers

Interview Structure:

- Greetings (2 minutes)
- Qualification (3 minutes)
- Open-ended Questions (20 minutes)
- Closing (5 minutes)
- Review & Reflect (10 minutes)

Interviewing Customers

Examples – Get to know the person

What is your name and role at your company?

How does your role fit in the company, department and overall?

What is the average annual budget for your department?

How are purchases made?

Who approves those purchases?

How do you discover new products?

Can you describe your typical workday?

Interviewing Customers

Example – Discover their pain points

What are the top priorities for your department?

What are your company's goals for this year?

What challenges stand in your way to achieving those goals?

Is there anything that you would like to see eliminated from your daily work?

Interviewing Customers

Example – Product/Service feedback

Did the product solve the problem?

Could the product have solved it better?

How could we improve the product?

What benefits can you see for you/your company if you were using this product?

What would have to happen in order for you to purchase this product?

What would you be willing to pay for this product?

Focus Groups

Purpose: They aim to understand participants' perceptions, beliefs, and attitudes through group interaction and discussion.

Participants: Typically, 6-10 people are selected based on shared characteristics such as demographics, interests, or experiences.

Moderation: A moderator guides the discussion, ensuring that all participants have the opportunity to share their views.

Applications: Commonly used in marketing, social sciences, and user research to explore consumer behavior, test new products, or gather feedback on services³.

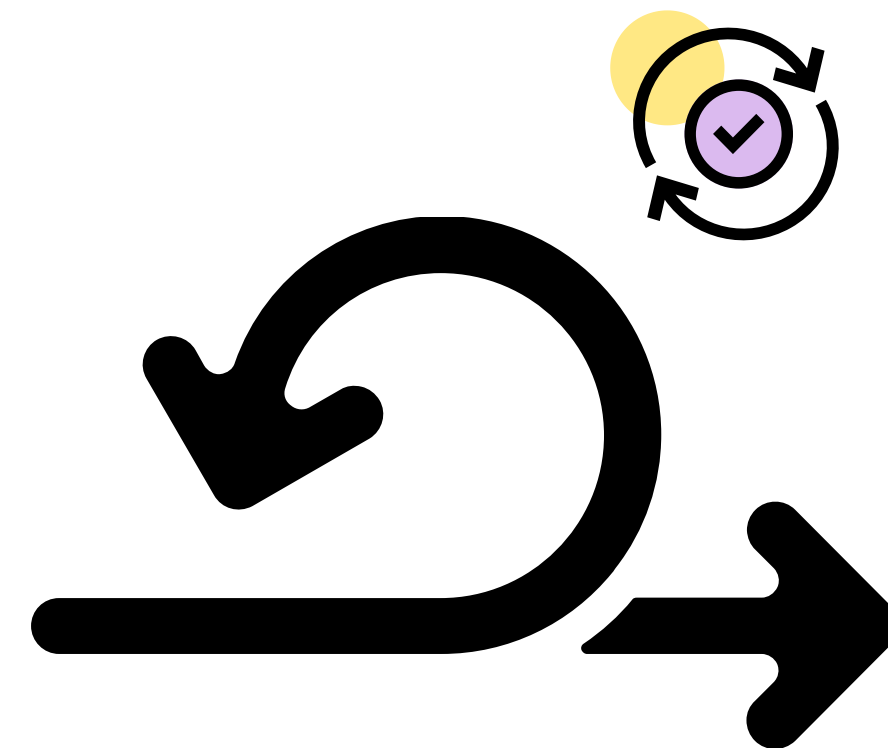

Product Iteration

Analyze feedback to see if there are common comments/suggestions.

Focus on the improvements that will add value to your customer
OR that will make it easier for them to recommend it/buy it.

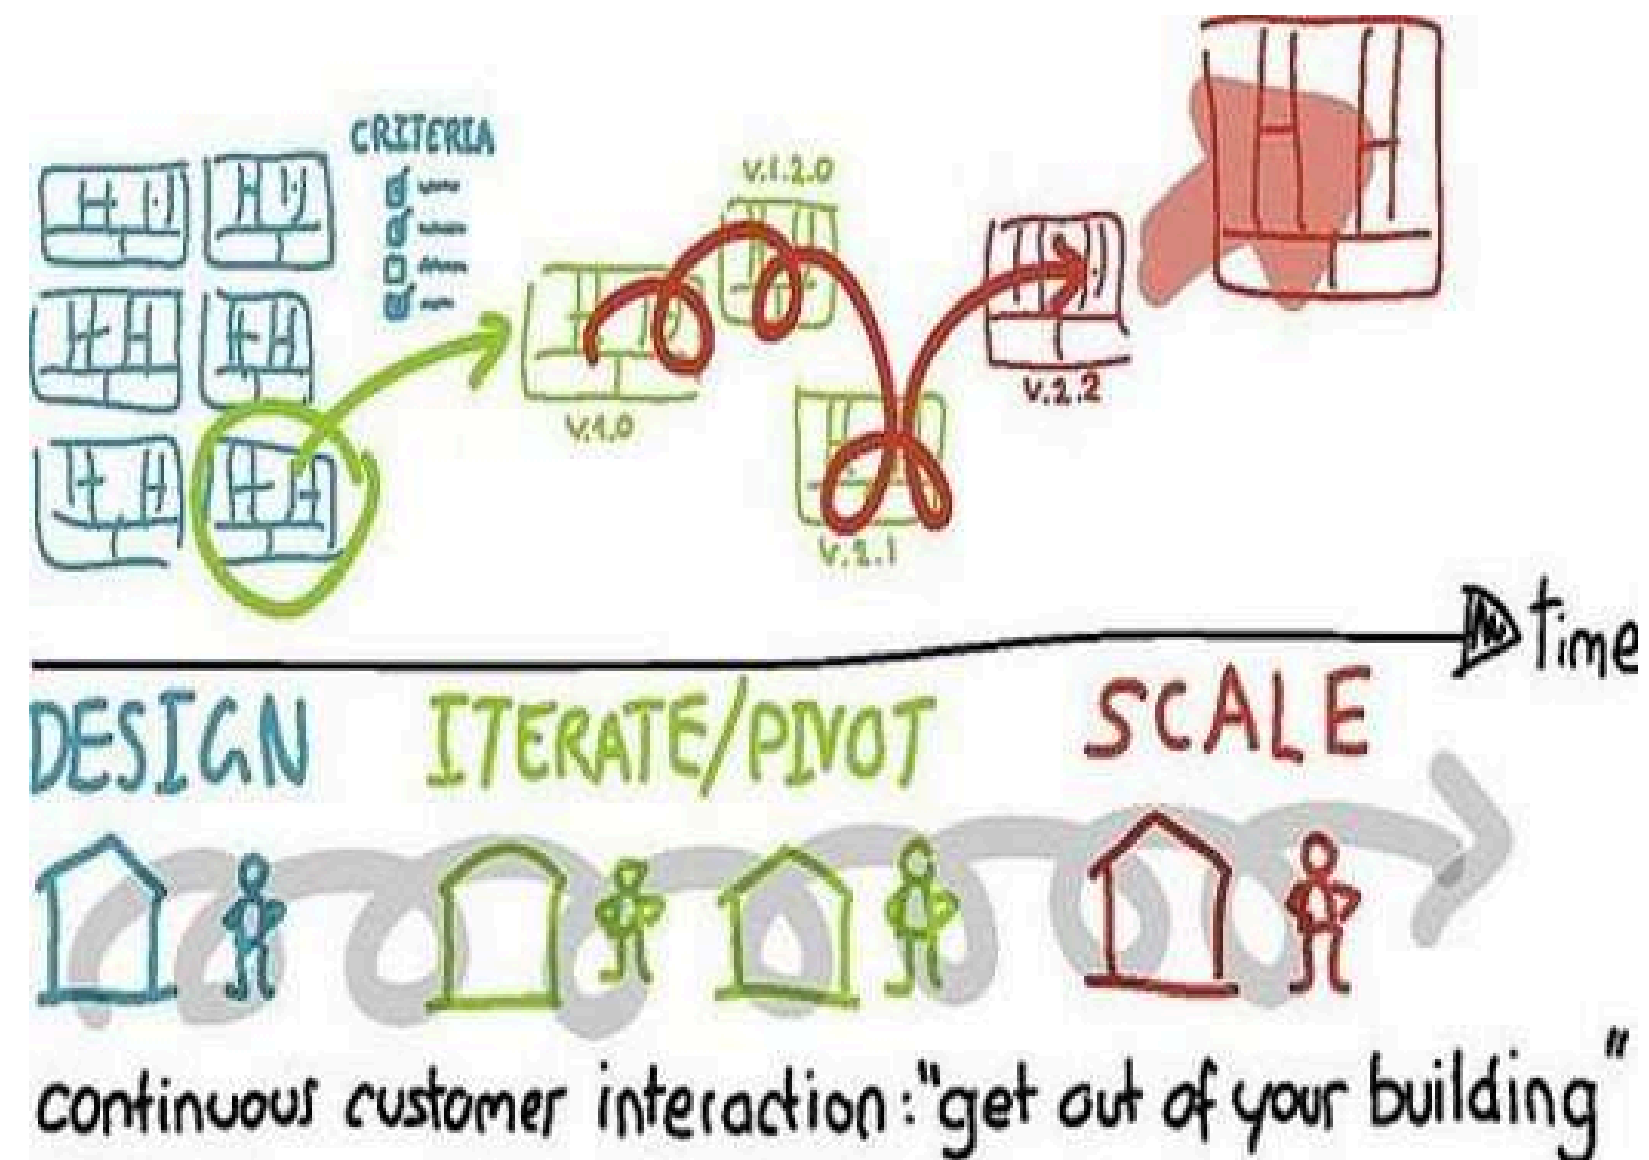

Incorporate into product.

Get revised version back into the hands of those early adopters.

Product Iteration

- Design MVP
- Find early adopters
- Validate / Iterate
- Pivot as needed
- Scale it after you “nail it”

Minimum Viable Product

Minimum Viable Product
(MVP)

Eventual Product

- Not supposed to be perfect.
- Just **good enough** to solve the customer problem you have identified.
- Get it out to customers, listen to their feedback and iterate it.

Attracting Early Adopters

Crowdfunding platforms – Kickstarter.

Release a free version of your product (scaled down, limited functionality).

Go where your target audience is (conferences, events, competitions).

Find fans of adjacent products and invite to be early adopters of yours.

KICKSTARTER

spectup

Validating Your Startup Idea

💡 Key Steps To Ensure Success

- 🔍 Identify a Real Problem**
 - ▶ Understanding the pain points of your target customers is essential for a successful idea. CB Insights: Solving real problems boosts success by 70%.
- 🗒 Conduct Surveys & Interviews**
 - ▶ Use platforms like Google Trends and Reddit to uncover market needs. Survey potential customers for feedback.
- 🔧 Build a Minimum Viable Product (MVP)**
 - ▶ Test your solution with a basic version of your product and adjust based on feedback.
- 🗣 Test Your Idea Within Your Network**
 - ▶ Pitch your idea to friends, family, and colleagues to get initial feedback. 29% higher success rate when tested within networks (Startup Genome).
- 👤 Pre-sell Your Idea**
 - ▶ Set up a landing page and gather pre-orders to test the demand.
- 💰 Crowdfunding Validation**
 - ▶ Platforms like Kickstarter help gauge interest and raise funds for your idea.
- 🗣 Market Research**
 - ▶ Conduct thorough research through surveys and interviews. Startups with proper research have a 93% success rate.
- 📝 Get Prototype Feedback**
 - ▶ Gather user feedback to improve your prototype and identify what works. 50% higher success rate for startups that gather early feedback.
- 📊 Run A/B Tests**
 - ▶ Test different versions of your product or landing page to see what resonates with users.
- 📋 Conduct a SWOT Analysis**
 - ▶ Analyze strengths, weaknesses, opportunities, and threats to make data-driven decisions. SWOT analysis boosts startup success by 30% (Startup Genome).

spectup[^]

What Factors To Consider When Validating A **Startup Idea**

-  **Experience and Skills Matter**
 - Ensure you and your team have the right skills.
 - Lack of experience is why 90% of startups fail.
 - Problem-solving and adaptability are crucial.
-  **Test Your Solution's Demand**
 - Check if potential customers see value.
 - Feedback from real users is essential.
 - Demand determines the survivability of your startup.
-  **Network and Resources**
 - Leverage your network for feedback and support.
 - Your network is your safety net.
 - "It's not what you know; it's who you know."
-  **Market Size and Accessibility**
 - Understand the market size and demand.
 - 42% of startups fail due to no market need.
 - Ensure the market can support your growth.
-  **Timing and Competition**
 - Timing is key to launching your product.
 - Assess competitors' market share.
 - Avoid entering an already saturated space.
-  **Financial Feasibility**
 - Plan your financials carefully.
 - Determine how much you need to launch.
 - Poor financial planning can lead to failure.

Always Ask Questions

“

Constantly asking 'Why?' during startup idea validation helps you uncover the core problem and ensures you're solving the right issue

Eric Ries

Author of The Lean Startup

”

Made with ❤️ by spectup.com

Deliverables - Prototyping

1. Develop an MVP of your solution. This could be an infographic of your service, a landing page, or a working version of your product.
2. Build a landing page/website for your business. Include a call to action such as “Sign up for our beta test” or “Click here to complete our survey”. Submit the URL to Blackboard.

Submit your MVP with Workbook 4 on Blackboard.

Reminder to submit PMReady Unit 4 for this week.
