

# The Social TRPG Platform

A Cross-Platform Online TRPG Platform Powered by AI, Rule Engines, and Friend-Based Social Networks

**Presenter:** Chao Chen (Seneca Polytechnic, AIGC Program)

**Background / Positioning:** Seneca HELIX / EWIL Program Project Pitch

# The Problem

## Hard to Learn for Beginners

Traditional TRPG rulebooks have hundreds of pages. Beginners often feel overwhelmed and stressed by complicated rules and character creation.

## The "Game Master" Shortage

Human Game Masters usually need 3 to 5 hours of prep time (writing stories, designing characters, and making maps) just to run a 3-hour game, leading to severe burnout.

## Missing Strong Social Connections Online

Most current options are built for single players or local groups, lacking a lightweight online experience that combines playing with friends and long-term storytelling.

# Market Opportunity

## A Growing and Young Audience

There are millions of TRPG fans worldwide, and the audience is getting younger. They strongly want online, immersive social gameplay.

## Bridging School Clubs and Online Play

School clubs, gaming communities, and young players need a platform that breaks time and space limits, letting them play with friends anytime, anywhere.

# Target Audience & Personas

## Novice Adventurers

Young players who want to experience immersive fantasy adventures but know nothing about the rules and need system guidance.

## Burned-Out Game Masters

Organizers who are tired of heavy prep work and just want to enjoy the fun of story progression with their friends.

## Friend-First Co-op Groups

Close friend circles who love playing together via voice or text, building strong bonds through life-or-death choices.

# The Solution

## Theater-of-the-Mind Immersion

Breaking past traditional graphics limits, AI uses detailed voice and text descriptions to spark players' imagination, offering an immersion far beyond regular video games.

## High Freedom and a Rule-Engineered World

There is only one shared world, driven by a strict rule engine. AI handles the orchestration of endless free actions, while function calling ensures absolute world fairness.

## Strong Social Networks with Friends

Designed for online friend groups to team up and play together, creating powerful social growth and loyalty through shared adventures.

# How It Works

1

Team Up with Friends Easily  
Players can use cross-platform devices (PC, mobile, or web) to invite friends and start a game session instantly.

2

AI Game Master Dynamic Acting  
Freeing human DMs, the AI instantly generates NPC reactions, environment descriptions, and story paths so you can play however you want.

3

Player Actions Shape the Living World  
Every choice your team makes in the world updates through the rule engine in real-time, permanently changing the story for your group and others to witness.

# Business Model & Growth

## Viral Social Growth

Built around "playing with friends" as the core growth engine. One host creates an AI room and invites multiple friends to join for free or at a low cost, driving rapid social sharing.

## Diverse Revenue Streams

**Subscription Plans:** Room hosts can unlock exclusive world templates, smarter AI models, and advanced world-building tools.

**Add-on Services:** Custom digital assets, expansion modules, and social cosmetics.

# Vision & Next Steps

- 📄 **Project Vision:** To build a self-evolving, boundless digital fantasy world that offers both ultimate freedom and deep imagination-driven immersion.

## Roadmap

01

### Phase 1

Complete the core single-player loop for the AI DM and rule engine using function calling.

02

### Phase 2

Launch cross-platform multiplayer and friend-party features for real-time world evolution.

03

### Phase 3

Partner with school clubs and early beta users for closed testing and feedback updates.
