Seneca HELIX Innovation Program: Week 6 Deliverables & The Pitch Workbook

Project Name: Next-Gen Multiplayer Living RPG Powered by Real-Time AI
Author: Chao Chen
Program: Seneca HELIX Venture LAB

Part 1: Week 6 Deliverables

1. Competitor Analysis

1.1 Competitive Matrix Comparison

Competitor Platform	Core Features	Weaknesses & Constraints	Strategic Positioning
Our Product*(AI Living RPG)*	Voice-first natural language interaction, multi-player cooperative voice rooms, dynamic generative living world with persistent state, lightweight 2D map/UI.	Early-stage brand awareness, ongoing inference API cost management.	Cost-effective, high speed/responsiveness, maximum accessibility for mass-market & TRPG newcomers.
Traditional VTTs*(Roll20, Foundry VTT)*	Digital grid maps, dynamic lighting, dice rolling macros, character sheet management.	Requires a dedicated human Game Master (DM/GM); steep learning curve; complex rules; difficult scheduling.	Expensive (time & subscriptions), slow pacing, niche hardcore audience.
Text AI Games*(AI Dungeon / Latitude)*	Text-prompt generative adventure, solo sandbox narrative.	Text-only solo experience; lacks voice-first party dynamics; world state memory drift; lacks balanced game rules.	Fast single-player prototype, but low social multiplayer retention and minimal audio immersion.
High-End CRPGs*(Baldur's Gate 3)*	AAA 3D graphics, motion capture, rich voice acting, deterministic D&D 5e rules.	Scripted branching paths (no arbitrary actions), heavy	Premium pricing ($60–$70), slow content release cycles, not lightweight or on-the-go.

tor Platform	Core Features	Weaknesses & Constraints	Strategic Positioning
		hardware specs, multi-year dev cycles.	

1.2 Strategic Positioning Matrix

- **X-Axis:** Freedom of Action (Preset Scripted Options vs. Open Natural Language Agency)
- **Y-Axis:** Accessibility & Barrier to Entry (High Requirement/Complex Rules vs. Lightweight/Play Anywhere)
- **Our Positioning: Top-Right Quadrant** — Maximum natural language agency paired with instant mobile/voice accessibility and zero rulebook friction.

2. S.W.O.T. Analysis

Strengths

- **Natural Voice Agency:** Players express any creative intent via real-time speech without menu limitations.
- **Autonomous AI Dungeon Master:** Solves the #1 industry bottleneck—the shortage of experienced human DMs and scheduling friction.
- **Lightweight Multiplatform Architecture:** Low battery drain, minimal bandwidth/rendering footprint, accessible on low-spec phones and browsers.
- **Immersion through Audio:** Dynamic spatial sound effects and conversational AI voice evoke vivid theater-of-the-mind roleplaying.

Weaknesses

- **API & Inference Cost:** Real-time multi-modal LLM and low-latency voice inference require ongoing compute expenditure.
- **World State Consistency / Hallucination:** Balancing open-ended narrative creativity with strict RPG rule enforcement and state persistence.
- **Early-Stage Brand Awareness:** Competing for player attention in an established gaming and entertainment market.

Opportunities

- **Surging Popularity of TRPG & D&D Culture:** Media hits (*Stranger Things*, *Critical Role*, *BG3*) have created millions of TRPG fans who want to play but cannot find games.

- **Rapid Maturation of Real-Time Voice Models:** Ultra-low latency voice APIs make synchronous AI conversation feel fluid and natural.
- **Expansion into Casual & Co-op Social Gaming:** Expanding from TRPG niches into voice-based social gaming (similar to *Among Us* or Discord hangouts).

Threats

- **Entrants by Incumbents:** Hasbro/Wizards of the Coast or major studios integrating generative AI into proprietary VTT platforms.
- **Model Inference Pricing Volatility:** Fluctuations in frontier model API costs impacting gross margins.
- **User Retention Vulnerability:** Novelty fatigue if AI narratives feel repetitive without strong game mechanics and progression loops.

3. The 4 P's of Marketing

- **Product:** Next-generation voice-first multiplayer living RPG featuring a real-time conversational AI DM, multiplayer voice rooms, lightweight 2D interactive tactical map, persistent generative world state, and dynamic soundscapes.
- **Price:**
    - **Freemium Tier:** Free basic voice room hosting with daily campaign limits and starter fantasy modules.
    - **Subscription (Pro Tier - $9.99/month):** Unlimited campaign hosting, custom AI DM voices, persistent world save slots, custom campaign generators, and priority low-latency voice servers.
    - **Creator Marketplace:** Community creators sell custom lore worlds, item packs, and campaign modules under a revenue-split model.
- **Place (Distribution):**
    - Direct-to-consumer mobile applications (iOS App Store, Google Play Store).
    - Web application (PWA) with instant link-to-play invite rooms (zero install friction).
    - Discord Bot / Activity integration allowing communities to launch games directly inside Discord voice channels.
- **Promotion:**
    - **Influencer Partnerships:** Collaborating with TRPG and gaming streamers (Twitch, YouTube, TikTok) to stream live gameplay sessions.
    - **Community Seeding:** Engaging Reddit (`r/rpg`, `r/dnd`, `r/DnDBehindTheScreen`) and Discord TRPG groups.

    - **Viral Clipping:** In-game "Clip & Share" feature exporting highlight audio clips with animated summaries to TikTok, Reels, and Shorts.

4. Market Size Estimations

- **TAM (Total Addressable Market): Global Tabletop Gaming & Digital RPG Market (~$18.5 Billion USD)**
  Encompasses the global tabletop roleplaying market, virtual tabletop platforms, and digital RPG software markets experiencing rapid post-2023 expansion.
- **SAM (Serviceable Addressable Market): English-Speaking Digital TRPG & CRPG Enthusiasts (~$2.4 Billion USD)**
  Active players of digital TRPGs (Roll20, Foundry, D&D Beyond), text adventures, and cooperative narrative games across North America, Europe, and English-speaking regions (estimated 30+ million active players).
- **SOM (Serviceable Obtainable Market): Early Adopters & College/Casual TRPG Gamers (~$12 Million USD)**
  Realistic 24-month target capturing 100,000 active paying/subscribed players ($10/month or equivalent annual ARPU) through collegiate gaming clubs, Discord gaming servers, and mobile-first TRPG beginners.

5. Marketing Channels

1. **Discord Community & Bot Integration:** Distribute a companion bot that lets Discord gaming servers launch AI RPG sessions with one command `/play-rpg`, capitalizing on existing voice chat habits.
2. **TikTok & YouTube Shorts Viral Highlights:** Short, punchy clips of absurd, highly creative player choices (e.g., *"We bribed the dragon with goblin poetry and the AI DM actually rolled with it!"*), highlighting player agency.
3. **TRPG & Gaming Influencer Sponsorships:** Sponsor actual-play podcasters, VTubers, and TRPG creators to play one-shot campaigns with their audiences.
4. **Campus & College Gaming Clubs:** Host local and virtual one-shot hackathon tournaments at Seneca Polytechnic and partner university gaming societies.

6. Growth Strategy

- **Product-Led Growth (PLG) & Instant Link Invites:** A single host can invite up to 4 friends using a short web link. Guests can join via browser voice chat without mandatory registration or downloads, driving viral referral loops (Viral K-factor > 1.2).

- **Strategic Partnerships:** Partner with tabletop indie publishers and digital asset creators to license lore, adventures, and rule modules. Collaborate with voice AI platform providers and cloud accelerators for developer compute credits and co-marketing.
- **Community Events & Game Jams:** Host monthly "AI Campaign Creation Jams" encouraging lore-builders to craft unique worlds using our AI lore tools.

7. Sales Process & Funnel

Funnel Stage	Mechanism & User Journey
1. Awareness	Player watches a TikTok/Shorts clip of an unexpected AI DM reaction, or sees a Discord bot invite link posted in their gaming server.
2. Interest / Discovery	User visits the landing page or joins via guest link; listens to a 30-second interactive voice demo showcasing real-time AI conversation and dice rolling.
3. Evaluation / Activation	User creates a free party room, invites friends, and completes their first 20-minute prologue quest with zero setup.
4. Retention	Weekly campaign progression notifications, character inventory leveling, and post-session audio recap cards shared to group chats.
5. Monetization / Conversion	The group reaches free tier capacity or wishes to unlock persistent custom campaign lore, converting the host to the $9.99/month Pro subscription or purchasing expansion packs.
6. Referral	Satisfied players become party leaders, inviting new friend circles into subsequent campaigns.

Part 2: Workbook 6 - The Pitch

1. The Big Problem

Tabletop Roleplaying Games (TRPGs) offer unmatched freedom and imagination, but they suffer from severe accessibility barriers. Over 80% of interested players cannot regularly play due to:

1. **The "Forever DM" Dilemma:** Running a game requires hours of homework, rules mastery, and intense mental effort, creating a catastrophic shortage of Game Masters.
2. **Scheduling Nightmares:** Coordinating 4–5 busy adults for a 4-hour session at a fixed physical location leads to abandoned campaigns.
3. **Intimidation & Gatekeeping:** Newcomers are paralyzed by 300-page rulebooks, complex math, and performance anxiety when speaking in front of strangers.
4. **Video Game Constraint:** Traditional video games limit player creativity to pre-written dialogue trees and invisible walls.

Affected Target Personas

- **Persona A (TRPG Beginners & Story Fans):** Want the magic of fantasy roleplay but feel too shy or overwhelmed by rules.
- **Persona B (Experienced TRPG Players & Time-Starved Adults):** Love TRPGs but cannot find a reliable DM or align schedules with busy friends.
- **Persona C (Narrative & CRPG Gamers):** Crave deeper creative agency than rigid dialogue wheels can ever provide.

2. The Elegant Solution

A mobile-first, voice-driven multiplayer living RPG powered by real-time conversational AI. Friends jump into a shared voice room where an autonomous AI Game Master handles narration, dice rolls, NPC voices, dynamic background soundscapes, and tactical map updates instantly.

Prototype & MVP Status

- A lightweight Web/Mobile app featuring an ultra-low-latency real-time voice channel.

- Integrated multi-modal AI orchestrator acting as DM: interprets natural speech, resolves actions under lightweight 5e/OSR rules, generates adaptive sound effects, and keeps persistent world states.
- 2D visual tactical board showing HP, inventories, and dynamically generated location maps.

3. Customer Segmentation

Customer Segment	Profile & Characteristics	Primary Value Proposition
Segment 1: "The Busy Veteran"	Core TRPG Players, Age 20–35	Hop into an impromptu 30-minute dungeon crawl with friends anytime from a phone without prep notes or a assigned DM.
Segment 2: "The Intimidated Beginner"	Gen Z / Casual Gamers, Age 16–25	Zero rulebook friction. Speak naturally; the AI translates actions into rules in a private, judgment-free environment.
Segment 3: "The Narrative Seeker"	Interactive Fiction & CRPG Fans	Boundless creative agency where unorthodox problem solving (bribing monsters, inventing novel spells) is recognized and rewarded.

4. Startup Accomplishments & Future Potential

Accomplishments to Date

- Formulated complete product concept, user journey, and technical design architecture.
- Validated low-latency multi-modal voice processing workflows with real-time prompt orchestration.
- Conducted initial qualitative interviews with TRPG community members confirming persistent pain points around DM availability and scheduling.

Definition of Success & Milestones

- Complete closed Alpha test with 50 multiplayer testing groups over the next 3 months.
- Achieve a session completion rate > 75% and viral invitation factor (K-factor) > 1.2.
- Deliver a commercially viable mobile and web MVP ready for public beta launch within 6 months.

5. The Ask & 12-Month Roadmap

The Pitch Ask

- Seeking **$150,000 CAD pre-seed funding** and strategic mentorship through the Seneca HELIX network.
- Seeking introductions to voice AI technical advisors and game publishing mentors.

12-Month Input/Output Roadmap

Phase & Timeline	Budget Input	Strategic Outputs & Operational Milestones
Months 1–3	$30,000 CAD	Finalize closed alpha prototype; benchmark voice latency under 800ms; onboard 50 playtest parties.
Months 4–6	$40,000 CAD	Launch Open Beta on Web & iOS; integrate Discord voice bot; achieve 5,000 Monthly Active Users (MAU).
Months 7–9	$40,000 CAD	Roll out Pro Subscription ($9.99/mo) and custom world generator tools; reach 25,000 MAU and 1,000 paying subscribers.

Phase & Timeline	Budget Input	Strategic Outputs & Operational Milestones
Months 10–12	$40,000 CAD	Launch Community Creator Marketplace; scale to 100,000 registered users ($25,000+ MRR), achieving cash-flow breakeven readiness for Seed round.
