

Business Model Canvas: Mobile AI Voice TRPG (Tabletop Role-Playing Game)

1. Strategic Context & Product Philosophy

The Breakthrough Opportunity: Reaching Mainstream Gamers

Instead of competing for hardcore tabletop veterans who already have tight-knit friend groups and strict rulebook preferences, our product targets the massive blue ocean of mainstream anime enthusiasts and single-player RPG gamers. Millions of players love watching TRPG gameplay highlights online, enjoy story-rich games like Baldur's Gate 3, or read interactive fantasy stories. However, three major barriers stop them from playing traditional tabletop games:

- **Intimidating Rules:** Hundreds of pages of complex manuals, stats, and math.
- **Social Friction & "LFG" (Looking For Group) Hassles:** Difficulty finding reliable teammates and a skilled Game Master (Dungeon Master / DM) who won't cancel sessions.
- **Social Anxiety ("Stage Fright"):** Feeling nervous or awkward speaking and roleplaying in front of strangers.

Product Philosophy: Invisible Rules, Maximum Immersion

Our guiding principle is: "**Hide the Rules, Amplify the Fun.**"

- All the tedious parts of traditional TRPGs—calculating stat bonuses, checking modifier tables, tracking inventory, and coordinating weekend schedules—are handled seamlessly behind the scenes by automated game systems and AI.
 - All the best parts of tabletop gaming—wild creative choices, high-stakes dice rolls, immersive voice acting, and emergent storytelling—are placed directly in the player's hands on mobile.
-

2. Business Model Canvas: 9 Core Building Blocks

Block 1: Customer Segments

- **Anime Fans & "TRPG Spectators":** Viewers of YouTube/Twitch/Bilibili TRPG replay streams and animation adaptations who love the lore of Call of Cthulhu (CoC) and Dungeons & Dragons (D&D) but haven't played themselves.
- **Single-Player RPG & Narrative Gamers:** Fans of story-driven RPGs (such as Baldur's Gate 3, Divinity: Original Sin) looking for portable, interactive roleplaying experiences on their phones.
- **Interactive Fiction & Murder Mystery Enthusiasts:** Players of interactive visual novels, escape games, and murder mystery games who crave deeper personal choices.
- **Solo & Busy Players:** Students and working professionals with unpredictable schedules who want quick, 30-minute tabletop sessions without needing to gather a group.

Block 2: Value Propositions

- **Zero-Barrier Instant Sessions:** The AI acts as an always-ready, patient Dungeon Master. Players never need to memorize rulebooks or wait for friends.
- **Full Voice & Dynamic Audio Immersion:** Advanced Text-to-Speech (TTS) brings distinct emotional voices to every Non-Player Character (NPC), backed by dynamic sound effects and responsive musical scores.
- **Light Mobile Visuals:** Optimized for vertical phone screens, featuring expressive 2D anime character art, atmospheric backgrounds, tactile 3D dice rolling animations, and key clue pop-ups.
- **Total Narrative Freedom with Automated Mechanics:** Players can speak or type whatever creative action they imagine. The AI dynamically adapts the storyline while our background engine accurately resolves stat checks and dice outcomes.
- **Stress-Free Flexible Play:** Switch effortlessly between private solo play (save and resume anytime) and casual co-op (1–3 friends plus an AI DM).

Block 3: Channels

- **Viral Social Highlights & Clips:** In-game recording tools that let players export their funniest dice failures, dramatic critical successes, or unexpected plot twists directly to TikTok, YouTube Shorts, and Instagram.

- **Gaming Communities & App Stores:** Featured placements on the App Store, Google Play, TapTap, and gaming forums (Reddit RPG groups, Discord, Steam community hubs).
- **Influencer Collaborations:** Sponsoring VTubers, anime creators, and tabletop streamers to run live, unscripted adventures with the AI DM.

Block 4: Customer Relationships

- **AI Companion & Memory Continuity:** The AI DM remembers player choices, past achievements, and recurring inside jokes across long story campaigns.
- **Safe, Non-Judgmental Atmosphere:** A welcoming space for beginners to experiment and roleplay without fear of judgment from elite veterans.
- **Creator & Community Co-creation:** Players can design custom characters, share original scenarios, and participate in community story challenges.

Block 5: Revenue Streams

- **Monthly / Season Adventure Pass (Subscription):** Provides unlimited voice interaction time, priority access to high-tier AI models, and exclusive companion voice packs.
- **Modular Story Packs (DLC / In-App Purchases):** Free access to starter campaigns, with premium purchase options for expanded universe modules (e.g., Cyberpunk, Victorian Horror, High Fantasy).
- **Cosmetics & Virtual Items:** Collectible 3D dice skins with unique sound effects, customized character portrait art, and thematic chat frames.
- **Creator Marketplace Revenue Share:** A split on sales when community writers publish and sell their own story modules on the platform.

Block 6: Key Resources

- **Fine-Tuned TRPG AI Models:** Language models specifically trained on story pacing, creative branching, and ruleset adjudication to avoid hallucination.
- **Low-Latency Emotional Voice Pipeline:** Real-time speech-to-text (STT) and voice synthesis (TTS) models that deliver natural conversational pacing with expressive emotional inflection.
- **Content & Rules Library:** A digital repository of streamlined, legal rulesets (such as Open Gaming License / System Reference Document frameworks) and structured campaign modules.

- **Proprietary Mobile Engine:** A lightweight mobile client built for fluid performance, low battery consumption, and responsive visual feedback.

Block 7: Key Activities

- **Agent Architecture & Anti-Hallucination Tuning:** Continual optimization to keep storylines coherent, enforce logical world rules, and maintain long-term memory across adventures.
- **Mobile Experience & Latency Optimization:** Streamlining voice input and audio streaming so players experience instant, lifelike conversations.
- **Story Module Production:** Operating an editorial and design pipeline to produce engaging 30-to-45-minute modular campaigns across diverse genres.
- **Community Management & Creator Tooling:** Building intuitive visual editors so players and writers can easily write their own AI-compatible quests.

Block 8: Key Partnerships

- **Cloud Infrastructure & AI Model Providers:** Cloud partners providing scalable GPU compute, language model APIs, and speech synthesis services.
- **Tabletop Publishers & Independent Authors:** Licensing established TRPG settings and partnering with popular tabletop module authors.
- **Voice Actors & Sound Designers:** Sourcing high-quality foundational voice samples for AI speech cloning and custom sound design.
- **Mobile Distribution Platforms:** App store editors and community gaming hubs for marketing support and promotional showcases.

Block 9: Cost Structure

- **AI Inference & Voice Server Expenses:** Variable costs from LLM tokens, speech recognition, and real-time audio synthesis.
 - **Engineering & Product Development:** Salaries for AI research engineers, game designers, and mobile frontend developers.
 - **Art, Sound & Licensing:** Investment in 2D character assets, background environments, original music, and licensed campaign rights.
 - **User Acquisition & Marketing:** Budget allocated to influencer campaigns, social media ads, and community events.
-

Business Model Canvas Summary

Building Block	Key Summary Points
1. Customer Segments	Anime fans, "TRPG spectators", single-player RPG players, interactive fiction readers, and busy solo gamers.
2. Value Propositions	Instant AI-driven sessions, full emotional voice acting, vertical mobile visual layout, total player choice freedom.
3. Channels	TikTok/Shorts viral highlight shares, mobile app stores, VTuber and streamer marketing collaborations.
4. Customer Relationships	Persistent AI memory across sessions, non-judgmental space for beginners, player-created content tools.
5. Revenue Streams	Monthly voice subscriptions, DLC story modules, cosmetic dice/art sales, creator marketplace fees.
6. Key Resources	Fine-tuned TRPG language models, real-time voice pipeline, lightweight mobile engine, legal rule library.
7. Key Activities	AI tuning and logic safeguards, audio latency reduction, monthly campaign creation, community tools.
8. Key Partnerships	AI compute providers, voice talent, tabletop game publishers, mobile app marketplace operators.

Building Block	Key Summary Points
9. Cost Structure	Real-time AI token generation, software engineering, visual artwork production, target user acquisition.

3. Strategic Execution & Risk Management

1. Managing AI Computing Costs vs. Player Pricing

- **Challenge:** Real-time voice generation and large language model prompts can become expensive if users play for hours continuously.
- **Strategy:** Use a hybrid approach where basic narrative text is free, while high-definition voice generation is managed through daily allowances and premium subscriptions. Use lightweight local/smaller models for standard dialogue and save larger foundation models for complex narrative branching.

2. Balancing Freedom with Narrative Structure

- **Challenge:** Pure freedom can lead to chaotic, nonsensical storylines, while overly rigid scripting ruins the tabletop spirit.
- **Strategy:** Implement a "State Machine + AI Narrator" hybrid system. Fixed milestones ensure the plot moves forward, while the AI has complete freedom to decide how the player travels between those milestones based on their creative input.
