

SLIDE 1: TITLE SLIDE

Chronicle of Worlds / mmoTRPG

Subtitle: A Cross-Platform Text/Voice TRPG Creation Platform Powered by Multimodal AI, Rule Engines & Strong Social Networks

Presenter: Chao Chen (Seneca Polytechnic, AIGC Program)

Background / Positioning: Seneca HELIX / EWIL Program Project Pitch

Industry Pain Points

Beginner Overload

Traditional TRPG rulebooks run hundreds of pages. Newcomers face complex rules, spells, and character builds, easily triggering intimidation and anxiety.

The "GM Shortage" & Burnout

Human DMs/GMs typically need 3–5 hours of prep work (writing scripts, designing NPCs, drawing maps) for a single 3–4 hour game session, leading to severe creator burnout.

Strong Social & Online Demand Gap

Existing solutions are mostly limited to single-player or local play, lacking a lightweight online multiplayer experience that balances "friend group co-op interaction" with "dynamic long-term world evolution."

Market Insights & Opportunity

A Large & Young Audience Base

Tens of millions of TRPG enthusiasts worldwide, with a young demographic whose demand for online, immersive social gameplay is growing increasingly urgent.

The Intersection of Physical Communities & Online Virality

Campus clubs, board game communities, and young online players urgently need an interactive platform that breaks time and space barriers — allowing them to pull together friends and "run a campaign" anytime, anywhere.

Target Audience & Personas

Novice Adventurers

Young players eager to experience immersive fantasy adventures but completely unfamiliar with the rules — needing system-guided onboarding.

Burnished DMs

Organizers crushed by heavy prep work who want to shed the burden of ceremony and simply enjoy advancing the story with friends.

Friend-First Co-op Groups

Young circles of close friends who love grouping up via voice/text, building extremely strong social bonds through shared life-and-death choices.

Core Solution

Theater of the Mind Immersion

Breaking through traditional visual limitations, vivid voice and text-based dynamic descriptions fully awaken players' "theater of the mind," delivering boundless imagination far beyond graphical MMOs.

Extreme Freedom & Rule-Engineered Single World

There is only one world, driven by a rigorous underlying rule engine. AI handles the演绎 of infinitely possible free actions, while Function Calling ensures absolute fairness of physics and world laws.

Strong Social Networking

Focused on online friend-group campaigns and co-op play, creating powerful social network virality and stickiness as groups collectively rewrite the world's timeline.

Product Workflow & Gameplay

Friends Group Up Seamlessly: Players invite friends across platforms (PC / mobile / web) with one click to form an adventure party, starting a session anytime, anywhere.

AI DM Dynamic Narration: Liberating human DMs — AI generates NPC reactions, environment descriptions, and story branches in seconds, truly achieving "however you want to play, the world responds."

Player Actions Drive Single World Evolution: Every choice made by the party in the world is fed through the rule engine in real time, permanently altering the world line — witnessed by friend groups and even the entire server.

Business Model & Growth Loop

Viral Social Growth

"Friend group co-op" is the core user acquisition driver. One user unlocking a premium AI DM room can invite multiple friends to join for free or at a low threshold, creating powerful social virality.

Diversified Revenue Streams

- **Subscription Membership:** Core room owners unlock exclusive premium world templates, smarter AI models, and advanced world evolution permissions.
- **Value-Added Services:** Personalized digital assets, module expansion packs, and social cosmetics.

Vision & Roadmap

Vision: Build a self-evolving, boundaryless digital fantasy world that combines ultimate freedom with theater-of-the-mind immersion.

Phase 1

Complete the single-player core logic validation of the AI DM and rule engine (Function Calling).

1

2

Phase 2

Enable cross-platform multi-device interaction and friend group mechanics, achieving real-time multiplayer world evolution.

Phase 3

Partner with campus clubs and early seed users for closed beta testing and iterative optimization.
